Date:- 01/08/2023

NOTIFICATION

Sub :- CBCS Syllabi of M. Sc. in Chemistry (Sem. I & II)

Ref.:- Decision of the Academic Council at its meeting held on 26/07/2023.

The Syllabi of M. Sc. in Chemistry (First and Second Semesters) as per **NATIONAL EDUCATION POLICY - 2020** and approved by the Academic Council as referred above are hereby notified for implementation with effect from the academic year 2023-24.

Copy of the Syllabi Shall be downloaded from the College Website (www.kcesmjcollege.in)

Sd/-Chairman, Board of Studies

To:

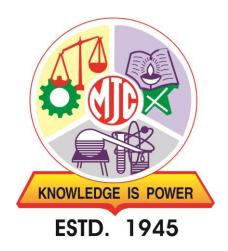

- 1) The Head of the Dept., M. J. College, Jalgaon.
- 2) The office of the COE, M. J. College, Jalgaon.
- 3) The office of the Registrar, M. J. College, Jalgaon.

STRUCTURE AND SYLLABUS F. Y. M.Sc. (Organic Chemistry)

UnderChoiceBasedCreditSystem(CBCS) and as per NEP-2020 Guidelines

[w.e.f.AcademicYear:2023-24]

Preface

Chemistry, being central to all other sciences, its study provides a fundamental insight into the changes taking place in and around our fascinating nature. No one can understand the modern world without the basic knowledge of chemistry and its advanced study help us to have a thorough knowledge of the entire world.

The envisioned aim of the M. Sc. Part I syllabus is to provide a focused, outcome-based syllabus with in-depth knowledge of the various concepts and theoretical principles of chemistry with an agenda to structure the teaching-learning experiences in a more student-centric manner. The syllabus is intended to familiarize the students with the sound basic understaning of the subject as well as expose them to advanced learning which would link to research programmes. The students will gain knowledge about relevant working methods for research, industry, administration, and education through lectures, laboratory work, exercises and project work. The Master's degree program in chemistry lays the foundation for doctoral programs in chemistry.

Program Outcomes (PO) for M.Sc. Program:

Upon successful completion of the M.Sc. program, student will be able to:

PO No. Student possess an in-depth understanding of advanced theories, concepts, and me their specific field of study.	
1 Student possess an in-depth understanding of advanced theories, concepts, and me their specific field of study.	
their specific field of study.	
	ng specialized
	ing specialized
2 Student should demonstrate advanced technical skills and proficiency in utilizi	
equipment, software, and methodologies relevant to their field of study.	
3 Student should be capable of critically analyzing complex problems and	1 synthesizing
information from various sources.	
4 Student should be proficient in effectively communicating scientific inform	nation to both
technical and non-technical audiences. They should be able to present their	r experimental
findings through oral presentations, scientific writing, and the use of appropriate vi	isual aids.
5 Student should demonstrate leadership qualities and the ability to work effective	ely as part of a
team.	
6 Student should have developed advanced research skills and the ability to independ	ndently design
and conduct rigorous scientific investigations. They should be able to analysis	lyze scientific
literature, formulate research questions, develop research plans, collect and analy	yze data, draw
valid conclusions and know about IPR.	
7 Student should understand and adhere to ethical principles and professional star	ndards in their
field	
8 Student should recognize the importance of continuous learning and professional	l development.
They should have the skills and motivation to stay updated with advancements	in their field,
engage in lifelong learning, and pursue further academic or professional opportuni	ties.

Program Specific Outcome PSO (M.Sc. Chemistry):

After completion of this course, students are expected to:

PSO	PSO
No.	
1	understand the principles of organic chemistry, inorganic chemistry, physical chemistry, analytical
	chemistry etc.
2	learn the main synthetic routes and reactivity for variety of organic compounds such as intermediates,
	natural products, other bioactive molecules.
3	get knowledge about stereochemical nomenclature, asymmetric synthesis, and its applications in
	organic synthesis.
4	understand the theory and principles of NMR, FT-IR, and Mass etc. for identification of unknown
	structure.
5	understand the laboratory techniques such as instrumentation, mixture separation, reflux, distillation,
	recrystallization, vacuum filtration, thin-layer chromatography and good laboratory practices and safety.
6	equiped with the required knowledge and generic skills required for employment or further training in R and
	D, science based industry and establishments, education, and training at management levels in other
	professions.

Examination Pattern for MSc

Theory Question Paper Pattern:

- 60 (External) +40 (Internal) for 4 credits
 - External examination will be of three hours duration
 - There shall be 5 questions each carrying equal marks (12 marks each) while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 3 out of 4 sub-questions; each 4 marks
 - o Q 2, Q3, Q4 and Q5Attempt any 2 out of 3 sub-question; each 6 marks.
- 30 (External) +20 (Internal) for 2 credits
 - o External examination will be of 1½ hours duration
 - o There shall be 3 questions Q1 carrying 6 marks and Q2, Q3 carrying 12 marks each. while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 2 out of 3 sub-questions; each 3 marks
 - o Q 2 and Q3 Attempt any 2 out of 3 sub-question; each 6 marks.

Rules of Continuous Internal Evaluation:

The Continuous Internal Evaluation for theory papers shall consist of two methods:

- **1. Continuous & Comprehensive Evaluation (CCE):**CCE will carry a maximum of 30% weightage (30/15 marks) of the total marks for a course.Before the start of the academic session in each semester, the subject teacher should choose any three assessment methods from the following list, with each method carrying 10/5 marks:
 - i. Individual Assignments
 - ii. Seminars/Classroom Presentations/Quizzes
 - iii. Group Discussions/Class Discussion/Group Assignments
 - iv. Case studies/Case lets
 - v. Participatory & Industry-Integrated Learning/Field visits
 - vi. Practical activities/Problem Solving Exercises
 - vii. Participation in Seminars/Academic Events/Symposia, etc.
 - viii. Mini Projects/Capstone Projects
 - ix. Book review/Article review/Article preparation
 - x. Any other academic activity
 - xi. Each chosen CCE method shall be based on a particular unit of the syllabus, ensuring that three units of the syllabus are mapped to the CCEs.
- **2. Internal Assessment Tests (IAT):**IAT will carry a maximum of 10% weightage (10/5 marks) of the total marks for a course.IAT shall be conducted at the end of the semester and will assess the remaining unit of the syllabus that was not covered by the CCEs.The subject teacher is at liberty to decide which units are to be assessed using CCEs and which unit is to be assessed on the basis of IAT.

The overall weightage of Continuous Internal Evaluation (CCE + IAT) shall be 40% of the total marks for the course. The remaining 60% of the marks shall be allocated to the semester-end examinations.

The subject teachers are required to communicate the chosen CCE methods and the corresponding syllabus units to the students at the beginning of the semester to ensure clarity and proper preparation.

Practical Examination Credit 2: Pattern (30+20)

External Practical Examination (30 marks):

- Practical examination shall be conducted by the respective department at the end of the semester.
- Practical examination will be of 3 hours duration and shall be conducted as per schedule.
- There shall be 05 marks for journal and viva-voce. Certified journal is compulsory to appear for practical examination.
- Practical examination will be of minimum 3 hours duration and shall be conducted as per schedule for 2 consecutive days in case of practical where incubation condition, allied aspects are essential.

Internal Practical Examination (20 marks):

- Internal practical examination of 10 marks will be conducted by department as per schedule given.
- For internal practical examination student must produce the laboratory journal of practicals completed along with the completion certificate signed by the concerned teacher and the Head of the department.
- There shall be continuous assessment of 30 marks based on student performance throughout the semester. This assessment can include quizzes, group discussions, presentations and other activities assigned by the faculty during regular practicals. For details refer internal theory examination guidelines.
- Finally 40 (10+30) marks performance of student will be converted into 20 marks.

Semester-I

F. Y. M. Sc. Semester-I

CHO-DSC-511: Advanced Physical Chemistry

To orient and acquaint the PG students towards the advanced concepts of phenomenon chemistry	nysical
To acquire knowledge about thermodynamics and phase equilibria	
To learn the concepts of nuclear chemistry	
To study and understand the concepts of reaction kinetics	
After successful completion of this course, students are expected to	
<u> </u>	
*	
· · · · · · · · · · · · · · · · · · ·	
complex reactions and their kinetics	
Contents	Hours
Thermodynamics	15
State functions, exact and inexact differentials, test of exactness, enthalpy of a system, entropy of a system, standard entropy and residual entropy, molar heat capacities, relation between Cp and Cv, laws of thermodynamics, Maxwell relations, thermodynamic equation of state, partial molar quantity and its significance, partial molar volumes, chemical potential, Gibbs-Duhem equation, thermodynamics of mixing-Gibb's free energy of mixing, entropy of mixing, enthalpy of mixing, volume of mixing.	
Phase equilibria Phase, components, degree of freedom, the Gibb's phase rule, derivation of phase rule, phase equilibria of one component system (water system, carbon dioxide system and sulphur system) phase equilibrium of two component system (two component system solid-liquid equilibria and simple eutectic systems), phase equilibrium of three component system, Clapeyron equation, Clausius-Clapeyron equation, integrated form of Clausius-Clapeyron equation and related numerical.	15
Nuclear Chemistry Parent-daughter decay-growth relationships: daughter nucleus is stable, parent shorter-lived than daughter, parent and daughter of nearly the same half-life, parent longer lived than daughter, secular and transient equilibrium. Applications of radioactivity: Typical reactions involved in the preparation of radio isotopes (Tritium, Carbon-14, Sodium-22, Phosphorous-32, Sulphur-35), Typical applications of radioisotopes as tracers: Analytical applications (isotope dilution analysis and neutron activation analysis) and related numerical

CHO-DSC-512: Modern Inorganic Chemistry

Course	To familiar with Modern inorganic chemistry.	
objectives	To understand the Reaction Mechanism of Coordination Compounds.	
	To get the knowledge of Metals and Metallurgy.	
	To know the Molecular symmetry.	
Course	After successful completion of this course, students are expected to	
outcomes	 understand Reaction Mechanism involve in Coordination Compounds. 	
	get the knowledge of Metallic Bond involvement in various chemical comparison.	ounds.
	be familiar with the metallurgical process.	
	 get the knowledge of symmetry elements and operations in molecular symmetry 	netry.
Unit	Contents	Hours
Unit I	Reaction Mechanism of Coordination Compounds	15
	Substitution reactions in octahedral complexes: Unimolecular Nucleophilic	
	Substitution (SN ₁) and Bimolecular Nucleophilic Substitution (SN ₂) reactions,	
	Types of intermediates formed during $S_{\rm N1}$ and $S_{\rm N2}$ reactions, lability and inertness	
	of octahedral complexes. Acid and base hydrolysis of octahedral complexes,	
	substitution reactions of square planar complexes. Oxidation Reduction reactions.	
	Two electron transfer reactions.	
Unit II	The Metallic Bond	15
	General properties of metals: Conductivity, Luster, malleability and cohesive force.	
	Theories of Bonding in metals: Free electron theory, valence bond theory,	
	molecular orbital or band theory. Conductors, Insulators and semiconductors.	
	Alloys-interstitial alloys and related compounds, alloys, Cu/Ni (Phase diagram	
	expected), and super conductivity.	
Unit III		15
	Metals and Metallurgy	13
	Occurrence of metals, various steps involved in metallurgical process,	
	concentration ore, calcination, roasting, reduction to free metal, Electrometallurgy,	
	hydrometallurgy, specialized technique for extraction of metals, refining and	
	purification, and thermodynamics of the oxidation of metals to metal oxides.	
Unit IV	Molecular Symmetry	15
	Symmetry elements and operations, symmetry planes, reflections, inversion centre,	
	proper /improper axes of rotation, equivalent symmetry elements and atoms,	
	symmetry elements and optical isomerism, and Classification of point groups and	
	procedure to determine the point group (with at least one example of each point	
	group).

Semester-I

CHO-DSC-513:Principles of Organic Chemistry

~		
Course	To study basic principles of organic chemistry To study basic principles of organic chemistry To study basic principles of organic chemistry	
objectives	To learn structure and bonding in organic molecules. To learn structure and the concents of most in machinism.	
	 To learn stereochemistry and the concepts of reaction mechanism. To study the role of common synthetic reagents. 	
	To study the role of common synthetic reagents.	
Course	After successful completion of this course, students are expected to	
outcomes	 develop better understanding of structure and bonding in organic molecules 	
	 learn the concepts of stereochemistry and apply them effectively. 	•
	 help students to understand different concepts involved in reaction mechanic 	sm
	• learn applications of different synthetic reagents in organic synthesis.	
Unit	Contents	Hours
Unit I	Structure and Bonding	15
	Review of basic principles of structure and bonding, application of acid base	
	concepts, HSAB theory, aromaticity and antiaromaticity, Hückel's rule, homo-	
	aromaticity, n-annulenes, heteroannulene, fullerenes, C-60, cryptates, Bonds	
	weaker than covalent: addition compounds, inclusion compounds, crown ethers,	
	cyclodextrins, catenanes and rotaxanes.	
Unit II	Stereochemistry	15
	Conformational analysis of cycloalkanes. Effect of conformation on reactivity.	
	Elements of symmetry, chirality, molecules with more than one chiral center.	
	Projection formulae (i) Fischer (ii) Sawhorse (iii) Newman (iv) Flying Wedge.	
	Threo and erythro isomers, methods of resolution, optical purity, enantiotopic and	
	diastereotopic atoms, groups and faces, stereospecific and stereoselective	
	synthesis. Asymmetric synthesis. Optical activity in the absence of chiral carbon.	
	Symmons symmons symmons special activity in the account of children	
Unit III	Reaction Mechanism	15
	Structure and Reactivity: Types of mechanisms, types of reactions, thermodynamic	
	and kinetic requirements, Hammond postulate, Curtin-Hammett principle,	
	transition states and intermediates, methods of determining mechanisms, isotopic	
	effects. Generation, structure, stability and reactivity of carbocations, carbanions,	
	free radicals, carbenes and nitrenes. Effect of structure on reactivity. The Hammett	
	equation and linear free energy relationship (sigma-rho) relationship, and Taft	
	equation.	
Unit IV	Synthetic Reagents	15
	Oxidation Reactions: CrO ₃ , Pyridinium dichromate (PDC), Pyridinium	
	chlorochromate (PCC, Corey's reagent), KMnO ₄ , MnO ₂ , Swern oxidation, SeO ₂ ,	
	Pb(OAc) ₄ , OSO ₄ , per-acid, HIO ₄ , DDQ, and Oppenauer oxidation.	
	a o(O/10/4, O5O4, por-acia, 111O4, DDQ, and Oppenation Oxidation.	

	Reduction reactions : LiAlH ₄ , NaBH ₄ , NaCNBH ₃ , MPV reduction, Na/liq. NH ₃ , H ₂ /Pd-C, Willkinsons catalyst, DIBAL-H, Wolff Kishner reduction, Zn-Hg/H ₂ O/HCL, and Bu ₃ SnH.

Semester-I

CHO-DSE-514 (A):Laboratory Planning and Safety

Course	Demonstrate safe laboratory skills for particular laboratory experiments.	
objectives	Learn and observe the safety and laboratory rules.	
	To describe hazard information: material safety data sheets (MSDSS), unde	rstand.
	To describe what is GLP and Principles of Good Laboratory Practice (GLP)	
Course	After successful completion of this course, students are expected to	
outcomes	 apply laboratory skills such as proper handling of materials and chemical w 	aste for
	particular laboratory experiments.	
	 apply safety management guidelines, material safety data sheets (MSDS)) about
	laboratory hazards.	
	 apply Chemical Management, Storage, Waste and Security. 	
	 apply Personal Protections during laboratory experiments. 	
Unit	Contents	Hours
Unit I	Laboratory Planning	8
	Introduction- definition of Laboratory, setting up a Laboratory.	
	Process Planning -Standard operating procedure, special procedure, Ordering	
	materials Emergency Planning-Posting and signs, Emergency action plan, Alarm	
	system activation, Evacuation procedure, Fire emergencies, spill/release	
	containment and 15 Cleanup method, Intruders, Vandalism or Theft, Medical	
	emergencies, accident reporting, safety equipment and supplies, utility outages.	
	• Equipment- Safety equipment, bio-safety cabinet, containment/safety shields,	
	eyewash fountains, fire extinguishers, First aid kits, Flammable safety cans,	
	laboratory fume hoods, Laboratory Refrigeration / Freezers, safety showers, spill	
	kits.	
	• Training- Laboratory specific training, refresher training, and documentation.	
Unit II	Safety Training General lab	7
	Safety, Emergency Management, Waste Management, Chemical safety, Biosafety,	
	Radiation safety, Laser safety, Compressed gas safety, Fume Hood safety, Personal	
	protective equipment, Chem. watch, Electrical safety, Machine shop safety,	
	Mechatronics lab safety, Clean room Safety and Laboratory Specific training	
Unit III	Chemical Safety, Waste and Recycling	7
	Safety data sheet, General chemical procedure, Chemical Exposure monitoring,	
	Chemical spills, Compressed gas safety, Carcinogenic, Reproductive and highly	
	toxic chemicals, and Chemical storage guideline, Biohazardous waste materials,	
	Chemical waste materials, Equipment Disposal, and Radiological waste materials.	

Unit IV	Personal Protective Equipment (PPE), Glassware Safety and OSHA 8
	laboratory:
	Introduction, Hazard Assessment, Eye and face protection, Head protection, Hand
	protection, Protective clothing, Respiratory protection, Hearing protection, and
	Foot protection. Inspecting glassware before use, Safe handling and storage,
	Working with glass rods or tubing, Vacuum and pressure operations, Cleaning and
	drying glassware, Disposal and spill clean-up. OSHA Laboratory Practices.
Study Resources	 Laboratory Safety Manual, IOWA State University. http://publications.ehs.iastate.edu/labsm/files/assets/common/download_s/publication.pdf FENS Laboratory, Laboratory safety handbook, 1stedition, Sabanci University ISBN9786059178594. F. Y. M. Sc. Semester-I

CHO-DSE-514 (B):Thermal and Electro Analytical Methods

Course	To learn the instrumental methods of analysis.	
objectives	 To understand the working principle of instrumental methods of analysis. To comprehend the comparative study of various methods of thermal analysis. 	sis.
	To understand various electroanalytical method.	
Course	After successful completion of this course, students are expected to	
outcomes	understand the instrumental methods of analysis.	
	• learn the working principle of various instrumental methods	
	• learn about thermal as well as electroanalytical methods.	
	learn different quantitative analysisi methods.	
Unit	Contents	Hours
Unit I	Thermoanalytical Methods	8
	Introduction, Thermogravimetric analysis (TGA): types, principle and method,	
	instrumentation, factors affecting, Differential Thermal Analysis (DTA):	
	Principle, instrumentation, factors affecting, applications,

CHO-DSC-515: Systematic Experimental Physical Chemistry

Course	To orient and acquaint the PG students towards the physico-chemical experime	nts
objectives	To developed the experimental skills.	
	To learn the principle and concepts of microwave spectroscopy	
	To learn handling of conductometer, potentiometer, pH meter, spectrophotometer.	er
Course outcomes	After successful completion of this course, students are expected to	
outcomes	• learn the preparation for each experiment by studying lab handouts and links the	erein
	• safety requirements and lab skills to perform physico-chemical experiments	
	 how to keep records of instruments, parameters, and experimental obsereporting of experimental result 	rvations
	Contents	Hours
	Perform any fifteen experiments of the followings:	60
	1. To determine the equivalent conductance of a strong electrolyte at various	
	concentrations and hence verify the Onsager's equation.	
	2. To determine the hydrolysis constant of sodium acetate conductometrically.	
	3. To determine the relative strength of chloroacetic acid and acetic acid by conductivity measurements.	
	4. To study the second order velocity constant of hydrolysis of ethyl acetate by sodium hydroxide using conductivity measurements.	
	5. To determine the critical micelle concentration (cmc) of sodium lauryl sulphate (SLS) conductometrically.	
	6. To determine the stability constant of the silver-ammonia complex by potentiometric method.	
	7. To determine the stability constant of the complex ion $Ag(S_2O_3)_2^{}$	
	potentiometrically.8. To determine the amount of chloride, bromide and iodide present in their mixture by potentiometric titration.	
	9. To determine the redox potential of Fe ²⁺ /Fe ³⁺ system by titrating it with standard K ₂ Cr ₂ O ₇ solution potentiometrically.	
	10. To determine the solubility product of the given sparingly soluble salts by potentiometric method.	
	11. To determine the dissociation constants of the given dibasic acid pH—metrically.	
	12. To determine the dissociation constants of polybasic acid (H ₃ PO ₄) pH–	

metrically.

- 13. To determine to Hammett constant of p-nitro benzoic acid pH metrically.
- 14. To determine the acidic and basic dissociation constants of an amino acid (glycine) and hence the isoelectric point of the acid by pH–metric titration.
- 15. To determine the isosbestic point of given indicator (methyl red) spectrophotometrically.
- 16. Simultaneous determination of cations from their binary mixture spectrophotometrically.
- 17. To determine the order of reaction between potassium persulphate and potassium iodide by fractional change method.
- 18. To investigate the adsorption of oxalic acid by activated charcoal and test the validity of Freundlich and Langmuir adsorption isotherms.
- 19. To construct the phase diagram of toluene, alcohol and water system.
- 20. To determine the molar volume of ethanol and its partial molar volume at room temperature in dilute aqueous solutions.

CHO-DSE-516 (A): Systematic Experimental Inorganic chemistry

Course	To study analysis of ores.	
objectives	 To study inorganic Preparations and purity of complexes. 	
	• To study the determination of concentration of metal by flame photometer.	
	To acquire the skill of analysis of binary mixtures.	
	To study instrumental methods of quantitative analysis.	
Course	After successful completion of this course, students are expected to	
outcomes	 understand the concept of ore analysis. 	
	apply the concept of potentiometric titration.	
	 understand the synthesis of inorganic complexes and determination of its pu 	ırity.
	be able to apply the concept to calculate concentration of metal by flame	
	photometry.	
	Contents	Hours
	Analysis of ores:	
1	Pyrolusite ore-Estimation of silica gravimetrically and Manganese volumetrically.	4
2	Haematite-Estimation of copper volumetrically and Iron gravimetrically.	4
3	Chromite ore–Estimation of Iron gravimetrically and chromium volumetrically.	4
	Inorganic Preparations and purity determinations	
4	Copper(I)-tris(thiourea).	4
5	sodium trioxalatoferrate(III)	4
6	Nitropentammino cobalt (III) chloride.	4
7	8-hydroxy Quinoline Nickel(II).	4
8	Prussian Blue/ Iron(III) hexacyanidoferrate (II)	4
9	Hexaammine cobalt (III) chloride.	4
10	Chloropentaamminecobalt(III) Chloride.	4
	Determination of ions from given solution by flame photometer using	
	calibration curve method	
11	To determine the Li from given solution.	4
12	To determine the Na from given solution.	4
13	To determine the K from given solution.	4
14	To determine the Ca from given solution.	4
	Analysis of binary mixtures by gravimetric and volumetric methods from the	
4-	mixture solutions.	
15	Copper- Nickel	4
16	Copper-Magnesium	4
17	Copper-Zinc .	4
18	Iron-Magnesium	4
19	Silver-Zinc	4
20	Lead-Tin	4

CHO-DSE-516 (B): Organic Compound Preparations

Course objectives	 To promote safety awareness and encourage safe working practices laboratory. Understanding the organic synthesis by single stage and double stage prep derivatives of organic compounds. Studying experimental techniques such as steam distillation and chromatography for the purification and analysis of given organic compoun To draw a structure and reactions, elemental analysis, IUPAC name and pre NMR Signals of organic compounds. 	arations column ds.
Course outcomes	 After successful completion of this course, students are expected to understand the importance of laboratory safety. trained to draw structures, reaction mechanism and predicted nmr spectra be chemistry software's. synthesize organic compounds by single and double stage preparation with purification and analysis. apply the green Chemistry principals for preparations of organic compounds. 	
	Contents	Hours
	Safety in chemical Laboratory, Laboratory Equipment &technique :	60
	Laboratory safety: Toxicity of Compounds used in Chemistry Laboratory, Safety Symbol, Material Safety Data Sheet (MSDS), Precautions in handling hazardous substances, Good Laboratory Practices (GLP), Information about laboratory glasswares, equipmentsetc: Multiple adapters, Condensers and Receiver Adapters Or connecters, Funnels, Hot water Funnels etc. Purification Techniques (Any Two) Distillation, Recrystalization and Sublimation Steam distillation. Column Chromatography. Solvent extraction using soxhlet extractor.	
	Use of Chemistry software's Introduction to ISI draw, Chem Draw, ChemSketch. Draw the structure of simple aliphatic and aromatic compounds, heterocyclic compounds with different substituent. IUPAC name and predict the NMR Signals. Sketch Design reaction mechanism scheme of any two addition and two substitution reactions. Derivatives (Any Three) Phenyl hydrazone derivative of Aldehyde/ketone. Anilide derivative of carboxylic acid.	

Imine derivative of aldehyde or ketones. Oxime derivative of aldehyde or ketones. Aryloxy derivative of carboxylic acid. Green Synthesis (Any Three) Brominating of acetanilide using cerric ammonium nitrate. Preparation of Benzilic Acid using NaOH /KOH under solvent-free conditions. Synthesis of acetanilide from aniline by using ZnO/AcOH. Synthesis of Dihydropyrimidinone from Ethyl acetoacatate, benzaldehyde and urea. **Use of Reagents (Any Three)** Resorcinol to 7-hydroxy, 4-methyl coumarin (H₂SO₄). Camphor to Borneol (NaBH₄). P- nitrotoluene to p- nitrobenzoic acid (Sodium Dichromate). Cyclohexanone to adipic acid (HNO₃). Organic Estimation (Any Two) Estimation of: Phenol Aniline Glucose Ethyl methyl ketone Nitro compound Methoxy groups Unsaturation Vogel, A. I. (1974). Practical Organic chemistry. Semester-I

CHO-RM-517: Research Methodology for Chemistry- I

Course	To study the role of research for societal betterment.	
objectives	To learn to survey literature by various sources.	
	• To cultivate analytical and reasoning thinking in research.	
	To learn the preparation of a research design.	
Course	After successful completion of this course, students are expected to:	
outcomes	• learn to apply research in societal development.	
	• collect data effectively through literature survey.	
	 apply analytical and reasoning thinking skills to solve research problem. 	
	 prepare research design for successful completion of research. 	
Unit	Contents	Hours
Unit I	Research Fundamentals and Terminology	15
	Research: Definition, Meaning, objectives, types and significance, qualities and	
	criteria of good research, research methodology versus methodology, research	
	and scientific method, research process, list of National Importance Institutes and	
Unit II	CSIR laboratories.	15
Unit II	Research Problem And Research Design Research Problem: Meaning, necessity, components, criteria of selection and	15
	technique involved in defining a problem. Research Design: meaning, need,	
	features; basic principles of experimental design and important concepts relating	
	to research design.	
Unit III	Literature Survey By Print	15
	Print:Sources of information: Primary, secondary, tertiary sources; Journals: Journal abbreviations, abstracts, current titles, reviews, monographs, dictionaries, text-books, current contents, Introduction: Chemical Abstracts Service, Beilstein database, Subject Index, Substance Index, Author Index, Formula Index with examples.	
Unit IV	Literature Survey By Digital Means	15
	Digital Means: Internet, World Wide Web, internet resources for chemistry, finding and citing published information, web resources, e-journals, journal access, TOC alerts, hot articles, citation index, Impact factor, H-index, UGC infonet, e-books, internet discussion groups and communities, blogs, preprint servers, search engines, Scirus, google scholar, ChemIndustry, wiki- databases, ChemSpider, Science Direct, SciFinder, Scopus, C & EN News Reaxys.

Semester-II

F. Y. M. Sc. Semester-II

CHO-DSC-521: Quantum Chemistry and Molecular Spectroscopy

Course objectives	 To orient and acquaint the PG students towards the advanced concepts of phechemistry To acquire knowledge about quantum mechanics To learn the principle and concepts of microwave spectroscopy To learn and understand the concepts of infra-red and Raman spectroscopy 	ysical
Course	After successful completion of this course, students are expected to	
outcomes	the fundamental and advance concepts of quantum chemistry	
	 theoretical aspect of spectroscopy, which is helpful in development of the research in physical chemistry 	oretical
Unit	Contents	Hours
Unit I	Quantum Mechanics Introduction to quantum mechanics, wave function and its physical meaning, conditions for acceptable wave function, condition of normalization of wave functions, condition of orthogonality, operators, algebra of operators (addition and subtraction, multiplication), commutative property, linear operator, commutator operator, the operator ∇ and ∇^2 , eigen values and eigen functions, Hermitian property of operators, properties of a Hermitian operator, basic postulates of quantum mechanics and related numerical.	15
Unit II	Microwave Spectroscopy Introduction, the rotation of molecules, classification of molecules on the basis of the relative values of their three principal moments of inertia (linear, symmetric top, spherical top and asymmetric top molecules), rotational spectra: diatomic molecules - the rigid diatomic molecule, the intensities of spectral lines, effect of isotopic substitution, polyatomic molecules (linear, symmetric top and asymmetric top molecules, techniques and instrumentation and related numerical.	15
Unit III	Infra-red Spectroscopy Introduction, principle of infra-red spectroscopy, theory-molecular vibrations, vibrational frequency, force constant, the vibrating diatomic molecule: the energy of diatomic molecule, the simple harmonic oscillator, the anharmonic oscillator, the diatomic vibrating rotator, the vibrations of polyatomic molecules: fundamental vibrations and their symmetry, techniques and instrumentation and related numerical.	15
Unit IV	Raman Spectroscopy Introduction, quantum theory of Raman effect, classical theory of the Raman effect: Molecular polarizability, Pure rotational Raman spectra: linear and symmetric top molecules, vibrational Raman spectra: Raman activity of	15

	vibrations, rule of Mutual exclusion and related numerical.

F. Y. M. Sc. Semester-II

CHO-DSC-522: Applied Inorganic Chemistry

Course Course outcomes	 To recognize the inorganic chemical substances involvement in biological processes. To get the knowledge of inorganic polymers. To understand role of inorganic substances as catalyst. To understand the role of elements in medicinal chemistry After successful completion of this course, students are expected to apply knowledge of inorganic substance to understand Bioinorganic Chemis get the knowledge of Inorganic polymers. be aware about the role of inorganic substances as catalyst. 	stry.
	understand the role of elements in medicinal chemistry.	
Unit	Contents	Hours
Unit I	Bioinorganic Chemistry	15
	Introduction, role of myoglobin and hemoglobin in biological systems. Metallo- enzymes: carbonic anhydrase, carboxypeptidase, peroxidases, catalases, cytochrome P-450. Inhibition and poisoning of enzymes, role of alkali and alkaline earth metal ions in biological system, biological activity and toxicity of some elements, and biological fixation of nitrogen.	
Unit II	Introduction, properties of inorganic chemistry, glass transition temperature. Types: 1) Phosphorus-based polymers: a) Phosphorus-based chain polymers: Polyphosphazenes, Polyposphonitrilic chlorides, Polyphosphoryl Chlorides. b) Phosphorus-based network polymers: Polymeric phosphorus Pentoxide, Polyorthophosphates of boron, Polymeric silver phosphate, borophosphate glasses. 2) Sulphur-based polymers: Polymeric sulphur, polymeric sulphur nitride, chalcogenideglasses. 3) Boron-based polymers: Polyboranes, polymeric boron nitride 4) Siliconbased Polymers: organosilicones, silicone rubber, silicon resins. 5) Coordination polymers: natural and synthetic coordination polymers.	
Unit III	Catalysis Catalysis, Catalyst: Properties, types. Catalytic steps in organotransition metal catalyst, hydrogenation of alkenes, hydroformylation, Monsanto acetic acid synthesis, Wacker oxidation of alkenes, alkene polymerization, heterogeneous catalysis, nature of heterogeneous catalyst, examples of heterogeneous catalysts (hydrogenation, oxidation).	
Unit IV	Chemistry of Elements in Medicine Introduction, Chelation therapy, use of cis-[PtCl ₂ (NH ₃) ₂] complex in cancer treatment, Complexes of Au against rheumatoid arthritis, Imaging agents, and contribution of individual elements(Na, K, Li, Mg, Ca, Mn, Fe, Co, Ni, Cu, Zn, Mo, W, Pt, Au, Bi, and Ru).

CHO-DSC-523:Organic Reactions and Spectroscopy

Course objectives	 To make a systematic study of aliphatic and aromatic nucleophile substitution reactions To make a systematic study of aromatic electrophilic substitutions reactions 	
	 To learn important name reactions involved in organic synthesis. To learn fundamental of PMR technique. 	
Course outcomes	After successful completion of this course, students are expected to understand systematic details of aliphatic and aromatic nucleophile substitute understand systematic details of electrophilic substitutions reactions. learn various name reactions involved in organic synthesis. learn and apply applications of spectroscopy.	tion.
Unit	Contents	Hours
Unit I	Nucleophilic Substitution a) Aliphatic Nucleophilic Substitution: $S_N 1$, $S_N 2$, mixed $S_N 1$ and $S_N 2$, $S_N i$ mechanism, neighbouring group participation by π bonds andanchimeric assistance. Nucleophilic substitutions at an allylic, aliphatic and vinylic carbon. Effects of substrate structure, attacking nucleophile, leaving group and reaction medium on reactivity of SN reactions. b) Aromatic Nucleophilic Substitution: $S_N Ar$, Benzyne mechanism. Reactivity: Effect of substrate, leaving group and attacking nucleophile. The Von Richter, Sommelet-Hauser and Smiles rearrangements.	15
Unit II	Aromatic Electrophilic Substitution Arenium ion mechanism, orientation and reactivity, energy profile diagram, calculation of partial rate factor, the ortho/ para ratio, Ipso substitution, Orientation in other ring systems such as Naphthalene, Anthracene, six and five membered heterocycles, Diazonium coupling, Vilsmeier reaction, and Gattermann–Koch reaction.	15
Unit III	Name Reactions	15
	Bayer-Villiger Oxidation, Reformatsky, Robinson annulation, Stork enamine, Sharpless asymmetric epoxidation, ENE reaction, Hell-Volhard-Zelinsky reaction, Chichibabin reaction, Ulman reaction, Rosenmund reaction, Darzen reaction, Knovenagel reaction, and Biginelli reaction.	
Unit IV	Spectroscopy PMR: Fundamentals of PMR, chemical shift, factors affecting chemical shift,	15

	anisotropic effect, spin-spin coupling, coupling constant, applications to simple structural problems integration coupling (1st order analysis). Problems on UV, IR and PMR.

CHO-DSE-524 (A): Symmetry and Group Theory

Course Course outcomes	 To understand the important role of symmetry elements and operations groups and their applications in the prediction of various molecular projection. To understand the representation of groups. To understand the molecular Orbital Theory aspects to group theory. To learn L-S coupling for dn states. After successful completion of this course, students are expected to understand the important role of symmetry elements and operations groups and their applications in the prediction of various molecular projection of understand the representation of groups. understand the molecular Orbital Theory aspects to group theory. learn L-S coupling for dn states. 	n point
Unit	Contents	Hours
Unit I	Group Theory and Point Groups Symmetry elements and symmetry operations, definition of group and its characteristics, subgroups, classes, similarity transformation. Products of symmetry operations, relations between symmetry elements and operations	7
Unit II	Representation of Groups representation of groups, reducible and irreducible representations, Great orthogonality theorem, direct product, character tables, Wave functions as basis for irreducible representations (p- and d-orbitals), vanishing integral and chirality.	7
Unit III	Symmetry Aspects of Molecular Orbital Theory: General Principles (SALC and indirect projection operator), MO study of cyclopropylium cation, butadiene, cyclobutadiene, benzene), Secular equations, (resonance energies and aromaticity), MO of C2v, C3v, Td and Oh molecules including hybridized orbitals as LCAO.	8
Unit IV	Molecular Vibrations and Electronic Transitions Normal Mode analyses. Selection rules, spectral transition probability, Electronic configurations and states, free-ion term, L-S coupling for dn states, splitting of one electron levels in an octahedral and tetrahedral environment, vibronic coupling, Correlation Diagrams, Orgel and Tanabe-Sugano diagrams.	8

CHO-DSE-524 (B): Applications of Nanotechnology

Course	To aware the concept of nano.	
objectives	 To learn the techniques used in fabrication of nanomaterial. 	
	 To learn the methods of synthesis and applications of nanomaterials. 	
	To learn the concept of Nanomaterials for Environmental Remediation.	
Course	After successful completion of the course the students:	
outcomes	 student will understand future perspective of nanotechnology. 	
	 student will aware of the techniques to study nanomaterials. 	
	new window for research work will open for the students.	
Unit	Contents	Hours
Unit I	Nano-The expanding Horizon	8
	Introduction, Fundamentals of nano, Nanoscale phenomena, Sigificance of	
	nanomaterials and its impact, Classification of nonmaterial's, need for it, issues	
	and other perspectives, Prospective applications.	
Unit II	Fabrication of Nanomaterials	7
	Top-down and Bottom-up approaches, Gas phase synthesis, Liquid phase	
	synthesis, Solid phase synthesis, Lithography.	
Unit III	Nanomaterial Evaluation:	8
	Need for material studies, Structural property studies, Morphological analysis,	
	Optical property studies, Electrical property studies, Magnetic property studies,	
	Mechanical property studies.	
Unit IV	Nanomaterials for Environmental Remediation	7
	Environmental remediation by chemical degradation/ Removal of contaminants,	
	Nanomaterials as sorbents, Nanofiltration- for clean water, Dendrimers- the	
	nanoreactors for remediation, carbon nanomaterials- Versatile new Adsorbents,	
	Nanoscale biopolymers, Future prospects.

Semester-II

CHO-DSC-525: Advanced Analytical chemistry Practicals

~		
Course	To know various instrumental analysis techniques.	
objectives	To learn to operate various instruments.	
	• To learn solutions, preparations.	
	To learn principle and working of analysis and instrumentation.	
Course outcomes	After successful completion of this course, students are expected to	
	• do qualitative and quantitative analysis using instruments.	
	• handle instruments like conductometer, potentiometer, flame photometer,	
	spectrophotometer, etc.	
	 understand determination of strength of acids. 	
	estimate halide ion in given sample.	
Unit	Contents	Hours
	Perform any fifteen experiments of the followings:	60
	Instrumental techniques: Electroanalytical techniques	
	1. Analysis of commercial vinegar by conductometric titration.	
	2. Estimation of phenol by conductometric titration with NaOH.	
	3. Determination of strength of HCl and CH ₃ COOH in a mixture	
	conductometrically.	
	4. Determination of strength of HCl and oxalic acid in a mixture	
	conductometrically.	
	5. Determination of strength of oxalic acid and CH ₃ COOH in a mixture conductometrically.	
	6. Determination of degree of dissociation and dissociation constant of acetic acid	
	conductometrically.	
	Potentiometry	
	1. Determination of strength of HCl and CH ₃ COOH individually and in a mixture potentiometrically.	
	2. Determination of Fe(II) by potentiometric titration with K ₂ Cr ₂ O ₇ .	
	3. Estimation of halide in a mixture by potentiometry.	
	4. Determination of stepwise stability constant of silver thiosulphate complex by	
	potentiometrically.	
	Optical methods	
	 Determination of pK of indicator by colorimetry. To estimate the amount of NH₄Cl colorimetrically using Nesseler's Reagent. 	
	3. To study the complex formation between Fe(III) and salicylic acid and find the	
	formula and stability constant of the complex colorimetrically (Job's method).	
	4. To determine the dissociation constant of phenolphthalein colorimetrically.	
	5. Estimation of iron in wastewater sample using 1,10-phenanthroline.	
	p. Estimation of from it wastewater sample using 1,10-phenaltinonne.	

	6. Estimation of Na+ / K+ / Ca2+ by Flame photometry.	
	Non-instrumental	
	1. To determine the Hardness of a given water sample.	
	2. To determine the acidity of a given water sample.	
	3. To determine the alkalinity of a given water sample.	
	4. To determine the acid value of a given oil sample.	
	5. Extraction and separation of curcumine/beetroot/ginger by soxhlet	
	apparatus.

Semester-II

CHO-DSE-526 (A): Applied Organic Chemistry Practicals

Course	 To study systematic qualitative analysis of organic binary mixture. 	
objectives	 To learn single stage organic synthesis. 	
	 To learn binary stage organic synthesis. 	
	To learn an estimation of different organic compounds.	
Course outcomes	After successful completion of this course, students are expected to	
outcomes	• identify types, presence of elements/functional groups and various other q	ualitative
	properties of organic compounds.	
	 perform, explain and calculate theoretical and practical yield of the produce 	et.
	 learn to perform single stage and two stage organic synthesis. 	
	Contents	Hours
	Organic Qualitative Analysis (Eight Binary Mixtures)	60
	Systematic Analysis of Binary Mixture (Solid-solid, solid-liquid, liquid-liquid	
	mixtures) will include determination of:	
	• Nature	
	TypeSeparation and Purification	
	 Individual Analysis of each Compound 	
	(i)Preliminary Tests	
	(ii) Physical constant	
	(iii) Detection of elements	
	(iv) Detection of functional group tests	
	(v) Characteristic / Confirmatory tests of functional group (s)	
	Single Stage Preparation Monitored by TLC (Any Five)	
	Acetophenone to benzalacetophenone	
	 Resorcinol to 7-hydroxy,4-methyl coumarin 	
	Camphor to Borneol	
	Benzophenone to benzhydrol	
	 Acetoacetic ester to pyrazolone 	
	 p-Amino benzoic acid to p-chloro benzoic acid 	
	• 2-Methoxy naphthalene to 1-formyl-2-methoxy naphthalene	
	Glycine to benzoyl glycine	
	Cyclohexanol to adipic acid	
	Cyclohexanone to oxime	
	 p-Nitro toluene to p-nitro benzoic acid 	

	Two stage Preparations: (Any Two) Phthalic acid - phthalic anhydride - phthalimide. Chlorobenzene- 2,4- dinitrochloro benzene - 2,4-dinitrophenol. Acetophenone-Oxime-Acetanilide. Nitrobenzene - m- Dinitrobenzene - m-Niroaniline.

F. Y. M. Sc. Semester-II

CHO-DSE-526 (B): Practicals in Applied Inorganic Chemistry

Course	To study analysis of Drug samples.	
objectives	To determine the lattice energy of binary salts.	
	To determine the ions by chromatography.	
	To determine the elements by using different instruments.	
	To study various estimation methods.	
Course	After successful completion of this course, students are expected to	
outcomes	• understand the experimental techniques for Drug analysis.	
	• determine lattice energy of binary salts.	
	• learn separation and identification using paper chromatographic technique.	
	• apply the knowledge of instrumentation for the inorganic qualitative analysis	is.
	• the knowledge of difference type of inorganic estimations.	
	Contents (any 15)	Hours
	Drug Analysis.	
1	Determination of iron from given drug sample.	4
2	Determination of from given drug sample. Determination of calcium from given drug sample.	4
3	Estimation of ascorbic acid in Vitamin-C tablets	4
3		-
	To determine the lattice energy of binary salts	
4	Sodium Chloride (NaCl)	4
5	Potassium Chloride KCl	4
6	Calcium Chloride CaCl	4
7	Manganese dichloride (MnCl ₂)	4
8	Copper dichloride (CuCl ₂)	4
	Chromatography	
9	Determination of the Rf value of Pb, Cu, Cd ions by using paper chromatographic	4
	technique.	
10	Determination of the Rf value of Fe, Al, and Cr ions by using paper	4
	chromatographic technique.	
11	Determination of the Rf value of Ba, Sr, and Ca ions by using paper	4
	chromatographic technique.	

	T4	
4.5	Instrumentation:	_
12	Estimation of phosphate from wastewater by calibration curve method using	4
	spectrophotometrically.	
13	Spectrophotometric determination of phosphate: estimation of phosphate in cola	4
	drinks.	
14	Estimation of Manganese from steel by spectrophotometrically.	4
15	To determine the amount of copper present by iodometric method	4
	(potentiometrically).	
16	To determine the number of chloride ions in the [Co(NH ₃) ₅]Cl ₃ and	4
	[Co(NH ₃) ₅ Cl]Cl ₂ (potentiometrically)	
17	Estimation of Boric acid using NH ₄ OH by conductometric method.	4
18	To determine the strength of given mixture of carbonate and bicarbonate in the	4
	given mixture by pH metric method	
	Estimations:	
19	Estimation of Sodium bicarbonate content from soda water.	4
20	Estimation of total hardness of water sample.	4
21	Estimation of Zn-Mg in the given mixture solution by titration with EDTA.	4

Semester II CHO-OJT-527: Internship/ On Job Training

Hours: 120 Credits: 4

Course	To provide the students with actual work experience
objectives	To provide the students with actual work experience To make aware prescribe standards and guidelines at work
objectives	·
	To develop the employability of participating student
	To avail an opportunities to eventually acquire job experiences
Course	After successful completion of this course, students are expected to:
outcomes	get actual work experience with office and virtual exposure to various
	management styles, technical, industrial, and proceduralsystems
	 acquainttheknowledge related to working hours, work protocols and guidelines
	 understand the roles and responsibilities of employee as well as team work
	• justify job experiences that match their potentials, skills, and competencies
	Internship
	An internship is a professional learning experience that offers meaningful,
	practical work related to a student's field of study or career interest. An
	internship gives a student the opportunity for career exploration and
	development, and to learn new skills.
	On the job training
	On the job training is a form of training provided at the workplace. During
	the training, employees are familiarized with the working environment
	they will become part of. Employees also get a hands-on experience
	using machinery, equipment, tools, materials, etc.
