#### K. C. E. Society's

# Moolji Jaitha College

An 'Autonomous College' Affiliated to K.B.C. North Maharashtra University, Jalgaon.

NAAC Reaccredited Grade - A (CGPA: 3.15 - 3<sup>rd</sup> Cycle) UGC honoured "College of Excellence" (2014-2019) DST(FIST) Assisted College

के. सी. ई. सोसायटीचे मूळजी जेठा महाविद्यालय

क.ब.चौ. उत्तर महाराष्ट्र विद्यापीठ, जळगाव संलग्नित 'स्वायत्त महाविद्यालय'

नॅकद्वारा पुनर्मानांकित श्रेणी -'ए'(सी.जी.पी.ए. : ३.१५ - तिसरी फेरी) विद्यापीठ अनुदान आयोगाद्वारा घोषित 'कॉलेज ऑफ एक्सलन्स' (२०१४-२०१९) डी.एस.टी. (फीस्ट) अंतर्गत अर्थसहाय्य प्राप्त

Date:- 01/08/2024

#### **NOTIFICATION**

Sub :- CBCS Syllabi of M. Sc. in Biotechnology (Sem. III & IV)

Ref.:- Decision of the Academic Council at its meeting held on 27/07/2024.

The Syllabi of M. Sc. in Biotechnology (Third and Fourth Semesters) as per **NATIONAL EDUCATION POLICY – 2020 (2023 Pattern)** and approved by the Academic Council as referred above are hereby notified for implementation with effect from the academic year 2024-25.

Copy of the Syllabi Shall be downloaded from the College Website (www.kcesmjcollege.in)

Sd/-Chairman, Board of Studies

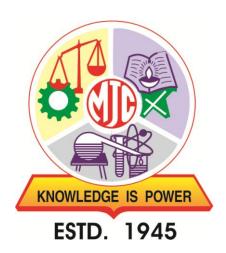

#### To:

- 1) The Head of the Dept., M. J. College, Jalgaon.
- 2) The office of the COE, M. J. College, Jalgaon.
- 3) The office of the Registrar, M. J. College, Jalgaon.

Affiliated to KBC North Maharashtra University, Jalgaon

#### **SYLLABUS**

## M.Sc. II Biotechnology

Under Choice Based Credit System (CBCS) and

as per NEP-2020 Guidelines

[w.e.f. AcademicYear:2024-25]

#### **Preface**

Skilled human resources is a prerequisite in higher education, and it is to be acquired through in-depth knowledge of theoretical concepts and hands-on laboratory methods of the subject. The M.Sc. part I in Biotechnology syllabus has been prepared per the guidelines of UGC, NEP-2020, and the Government of Maharashtra. It cultivates theoretical and practical knowledge of different fields among biotechnology students. The contents of the syllabus have been prepared to accommodate the fundamental aspects and advanced developments in various biotechnology disciplines and to complement the needs of various biotechnology sector applications. Besides this, the students will be enlightened with knowledge in the newer areas of Bioinstrumentations, Biomolecules, Microbial Genetics, Virology, Immune response, Tissue culture, Microbial fermentations, IPR, Patents, Bioethics etc. Furthermore, the syllabus is structured to cater to Biotechnology's present and future needs in the research field, industrial and environmental sectors, and entrepreneurship, emphasizing imparting hands-on skills. Hence, the curriculum has more experiments that shall run hand-in-hand with theory. The detailed syllabus of each paper is appended with a list of suggested readings.

The M.Sc. II biotechnology curriculum is divided into one- and two-year courses, covering many topics. It starts with general concepts in biotechnology, biomolecules, and microbial metabolism, followed by in-depth studies in cell biology, extremophiles, molecular biology, and microbial genetics. The syllabus also includes immunology, industrial and applied Biotechnology, Environmental Biotechnology and various advanced bio techniques such as bioinformatics, immune techniques, Tissue culture, and biosensors. Each section is designed to provide a comprehensive understanding of the respective field.

#### Program Outcomes (PO) for M.Sc. Program:

Program outcomes associated with an MSc degree are as follows:

- 1. Student has an in-depth understanding of advanced theories, concepts, and methodologies in their field of study.
- 2. Student should demonstrate advanced technical skills and proficiency in utilizing specialized equipment, software, and methodologies relevant to their field of study.
- 3. Studentsshould be capable of critically analyzing complex problems and synthesizing information from various sources.
- 4. Studentsshould be proficient in effectively communicating scientific information to technical and non-technical audiences. They should be able to present their experimental findings through oral presentations, scientific writing, and appropriate visual aids.
- 5. Students should demonstrate leadership qualities and the ability to work effectively as a team.

- 6. Students should have developed advanced research skills and the ability to design and conduct rigorous scientific investigations independently. They should be able to analyze scientific literature, formulate research questions, develop research plans, collect and analyze data, draw valid conclusions, and learn about IPR.
- 7. Students should understand and adhere to their field's ethical principles and professional standards.
- 8. Studentsshould recognize the importance of continuous learning and professional development. They should have the skills and motivation to stay updated with advancements in their field, engage in lifelong learning, and pursue further academic or professional opportunities.

#### Program Specific Outcome PSO (M.Sc. Biotechnology):

After completion of this course, students are expected to learn/understand the following:

No	PSO
1	Various biomolecules, their transport, diverse metabolic reactions and bioenergetics
2	Bioanalytical, biophysical, biomolecule purification and immunological techniques
3	Molecular biology concerning DNA replication, central dogma, gene regulation and rDNA
	technique
4	Concept of environmental biotechnology, biodiversity and its conservation
5	Techniques of plant/animal tissue culture and biotechnology of animal and plants
6	Bioprocess technology for agriculture, Food, pharmaceutical, fermentation and environmental sectors
7	Newer and applied areas such as bioinformatics, biostatistics and cancer biology
8	Research methodology, IPR, Bioentreprenuership, bioethics, professional development

#### Credit distribution structure for two years/one-year PG MSc programme

Level	Sem	Major (Cor	re) Subjects	Minor	OJT/Int, RP	Cumulative	Degree/
		Mandatory (DSC)	Elective (DSE)	Subjects		Credits/Sem	Cumulative Cr.
	I	DSC-1 (4T) DSC-2 (4T) DSC-3 (4T) DSC-4 (2P)	DSE-1(2T) A/B DSE-2(2P) A/B	RM (4T)		22	First-year PG OR One year PG diploma after
6.0	II	DSC-5 (4T) DSC-6 (4T) DSC-7 (4T) DSC-8 (2P)	DSE-3(2T) A/B DSE-4(2P) A/B		OJT/Int (4)	22	3 years UG
	Cum. Cr.	28	8	4	4	44	
		Exit option: PG	diploma (44 Cr	edits) after th	ree-year UG deg	gree	
	III	DSC-9 (4T) DSC-10 (4T) DSC-11 (4T) DSC-12 (2P)	DSE-5(2T) A/B DSE-6(2P) A/B		RP (4)	22	Second-year PG after 3 years UG OR PG degree after
6.5	IV	DSC-13 (4T) DSC-14 (4T) DSC-15 (2P) DSC-16 (2P)	DSE-7(2T) A/B DSE-8 (2P) A/B		RP (6)	22	4 years UG
	Cum. Cr.	54	16		4+10	88	7

Sem- Semester, DSC- Department Specific Course, DSE- Department Specific Elective, T- Theory, P- Practical, RM- Research Methodology, OJT- On-Job Training, Int- Internship, RP- Research Project, Cum. Cr.:Cumulative Credits

#### **Multiple Entry and Multiple Exit options:**

The multiple entry and exit options with the award of UG certificate/ UG diploma/ or three-year degree depending upon the number of credits secured;

Levels	<b>Qualification Title</b>	Credit Requ	Semester	Year	
		Minimum	Maximum		
6.0	One-year PG Diploma program	40	44	2	1
	after 3 Yr Degree				
6.5	Two-year master's Degree program	80	88	4	2
	After 3-Yr UG				
	OrPGDegreeafter 4-Yr UG				

#### **Examination Pattern for MSc**

Theory Question Paper Pattern:

- 60 (External) +40 (Internal) for 4 credits
  - o External examination will be of three hours duration
  - There shall be 5 questions, each carrying equal marks (12 marks each), while the tentative pattern of question papers shall be as follows;
  - o Q1 Attempt any 3 out of 4 sub-questions; each 4 marks
  - o Q 2, Q3, Q4 and Q5Attempt any 2 out of 3 sub-question; each 6 marks.
- 30 (External) +20 (Internal) for 2 credits
  - External examination will be of 1½ hours duration
  - There shall be 3 questions Q1 carrying 6 marks and Q2, Q3 carrying 12 marks each. while the tentative pattern of question papers shall be as follows;
  - o Q1 Attempt any 2 out of 3 sub-questions; each 3 marks
  - o Q 2 and Q3 Attempt any 2 out of 3 sub-question; each 6 marks.

#### **Rules of Continuous Internal Evaluation:**

The Continuous Internal Evaluation for theory papers shall consist of two methods:

- **1. Continuous & Comprehensive Evaluation (CCE):**CCE will carry a maximum of 30% weightage (30/15 marks) of the total marks for a course.Before the start of the academic session in each semester, the subject teacher should choose any three assessment methods from the following list, with each technique carrying 10/5 marks:
  - i. Individual Assignments
  - ii. Seminars/Classroom Presentations/Quizzes
  - iii. Group Discussions/Class Discussion/Group Assignments
  - iv. Case studies/Case lets
  - v. Participatory & Industry-Integrated Learning/Field visits
  - vi. Practical activities/Problem Solving Exercises
  - vii. Participation in Seminars/Academic Events/Symposia, etc.
  - viii. Mini Projects/Capstone Projects
  - ix. Book review/Article review/Article preparation
  - x. Any other academic activity
  - xi. Each chosen CCE method shall be based on a particular unit of the syllabus, ensuring that three units of the syllabus are mapped to the CCEs.

**2. Internal Assessment Tests (IAT):**IAT will carry a maximum of 10% weightage (10/5 marks) of the total marks for a course.IAT shall be conducted at the end of the semester and will assess the remaining unit of the syllabus that the CCEs did not cover.The subject teachercan decide which units will be evaluated using CCEs and which will be assessed based on IAT.

The overall weightage of Continuous Internal Evaluation (CCE + IAT) shall be 40% of the total marks for the course. The remaining 60% of the marks shall be allocated to the semester-end examinations.

The subject teachersmust communicate the chosen CCE methods and the corresponding syllabus units to the students at the beginning of the semester to ensure clarity and proper preparation.

#### **Practical Examination Credit 2: Pattern (30+20)**

#### **External Practical Examination (30 marks):**

- Practical examination shall be conducted by the respective department at the end of the semester.
- Practical examination will be of 3 hours and shall be conducted as scheduled.
- There shall be 05 marks for journal and viva voce. A certified journal is compulsory to appear for practical examination.
- The practical examination will be of a minimum of 3 hours duration. It shall be conducted as per schedule for 2 consecutive days in case of practical where incubation conditions and allied aspects are essential.

#### **Internal Practical Examination (20 marks):**

- The department will conduct an internal practical examination of 10 marks as per the schedule given.
- For internal practical examination, students must produce the laboratory journal of practicals completed along with the completion certificate signed by the concerned teacher and department head.
- There shall be continuous assessment of 30 marks based on student performance throughout the semester. This assessment can include quizzes, group discussions, presentations and other activities the faculty assigns during regular practicals. For details, refer to internal theory examination guidelines.
- Finally, 40 (10+30) students' performance will be converted into 20 marks.

#### MSc II (Biotechnology) Semester III

#### **BIT-DSC-612: Advanced Pharma and Process Biotechnology**

**Total Hours: 60** Credits: 4 Course To acquaint the student with knowledge of vaccine objectives To inculcate techniques used for drug designing To learn about various Bioprocess Technology To introduce the concept of biopharmaceutical production. **Course** After successful completion of this course, students are expected to: Understand advances in vaccine production techniques outcomes Get aware of different tools and techniques used for drug designing. Apply knowledge of biopharmaceuticals for industrial production Understand about transgenic production of biopharmaceuticals Unit **Contents** Hours Vaccinology Historical vaccination Overview of the immune system and fundamental aspects of immune response(s) to vaccines Conventional approaches to vaccine development o Live, attenuated and killed vaccines Quality control, preservation and monitoring of microorganisms in Unit I 15 seed lot systems. Newer vaccine approaches: sub-unit vaccines, synthetic vaccines, DNA vaccines, virus-like particles, recombinant vaccines, edible vaccines, Nanoparticles in vaccine delivery systems, Adjuvants: Concept, history and types. Overview of bacterial and viral vaccines and their importance to public health. Drug Designing and Biopharmaceutical Industry Concept and economics of drug discovery, identification and validation of target, role of transgenic animals in target validation. Tools and techniques in drug designing: **Unit II** Computer-aided drug designing, the role of bioinformatics in 15 genome-based therapy, antisense DNA technology, role of genomics research Biopharmaceutical industry: Definition and characteristics Biopharmaceutical market, products, manufacturing and research Concept of Fermentation and Bioprocess Technology Fundamental concept of fermentation and bioprocess technology **Bioreactors Unit III** 15 o Bioreactor design, criteria, operation and types of bioreactors. Concept of scale up, scale up challenges. Influence of various bioprocess parameters

	o pH, temperature, and medium components on product synthesis									
	•	Bioprocess monitoring and control, automated control vs manual control								
		of bioprocesses								
	•	Commercial production of various bioprocess-based products								
		(Penicillin, Streptomycin, Single cell protein)								
	Tı	ransgenic production of Biopharmaceuticals								
	•	Concept and advantage								
	•	Progress in transgenic animal-producing biopharmaceuticals								
Unit IV	•	Selected tissue and expression	15							
UIII IV	•	Challenges and issues	15							
	•	Animals of interest for transgenesis								
	•	Transgenic plant for production of biopharmaceuticals								
	•	Status of transgenics

# MSc II (Biotechnology) Semester III BIT-DSC-613: IPR, Biosafety and Bioethics

Total Hours: 60 Credits: 4

Total Hour	5.00	euits. 4
Course	To impart knowledge on intellectual property	
objectives	To give an insight intothe patent filling, different treaties signed	
	To understand various aspects of biosafety regulations	
	To describe the ethical perspective related to biotechnology.	
Course	After successful completion of this course, students are expected to:	
outcomes	Gain Knowledge about Intellectual Property Rights	
	Understand the process of filing a patent	
	Get an insight into Biosafety guidelines for industrial applications	
	Gain familiarity withcritical ethical issues	
Unit	Contents	Hours
	Introduction to Intellectual Property	
	General Introduction, Importance and history	
	IPR and Traditional Knowledge.	
	• Concept of - Patents, Trademarks, Copyright, Trade secrets,	
Unit I	Industrial Design and Rights	15
	Patentable and non-patentable items	13
	Geographical Indications	
	<ul> <li>Objectives and rights conferred</li> </ul>	
	<ul> <li>World Intellectual Property Rights Organization (WIPO),</li> </ul>	
	Ethics, Pros and Cons of IP protection.	
	Grant of patents, patenting authorities and treaties	
	Basic requirements of Patentability	
	Patent filing procedures	
TT . *4 TT	Patent licensing and agreement	1.5
Unit II	Patent infringement- meaning, scope, litigation	15
	Patenting of biological materials (life)	
	• Agreements and Treaties: GATT, TRIPS, WIPO Treaties, Patent	
	Co-operation Treaty (PCT)	
	Biosafety	
	Concept and historical background	
	Different levels of Biosafety, Biosafety levels of specific	
	Microorganisms	
Unit III		15
	Biosafety guidelines and regulations (National and International)  Bide in the Grand California (National and International)	
	Biological Safety Cabinets	
	• Containments – Types.	
	Biosafety Issues in Biotechnology	
-	·	•

	Role of Institutional Biosafety Committees (IBSC).	
Unit IV	Bioethics  Concept, importance and scope  Paradigms of Bioethics – National & International.  Ethical issues against the molecular technologies  Animal ethics and Rights,  Ethical guidelines for animal research  Bioethics in Biotechnology  Social and ethical implications of biological weapons	15

#### MSc II (Biotechnology) Semester III

#### **BIT-DSE-614A: Food Biotechnology**

**Total Hours: 30** Credits: 2 Course To understand new advances in food biotechnology objectives To know the ethics of genetically modified foods Course After successful completion of this course, students are expected to: outcomes Apply the knowledge of advances infood biotechnology Understand the applications of GM food in the food industry Unit **Contents Hours** Introduction to Food Biotechnology Quality attributes in food: sensory, nutritional and safety properties. Role of enzymes in baking, meat and meat processing Fermentative production of enzymes used in the food industry Unit I 15 Cheesemaking and whey processing Enzymatic processing of fruit juices. Biotechnological modification of nutritional value of foods. Fundamentals of food flavour and its biotechnological modification. Genetically Modified Foods and Ethics Ethics in food product development Regulatory and social aspects of biotechnology in genetically modified foods. Ethical issues concerning GM foods; testing for GM foods **Unit II** 15 Current guidelines for the production, release and movement of GM foods Safety evaluation of novel food products. Benefits and risks of GM foods

#### **Semester III**

**BIT-DSE-614B: Advances in enzymology** 

Total Hours: 30 Credits: 2

Course objectives  To learn the regulatory mechanism of enzyme catalysis  Course outcomes  After successful completion of this course, students are expected to:  Relate the concepts in enzymology for advanced applications  Unit  Contents  Hours  Concepts in Enzymology and Enzyme Kinetics  Properties and chemical nature of enzyme  Concept: enzyme activity, specific activity, catal, substrate specificity, turnover number and active site.  Ribenzyme, Abzyme, Zymogens and Coenzymes  Factors affecting enzyme activity: pH, temperature, substrate concentration, activator and Inhibitor.  Isoenzyme: Concept and properties e.g. LDH  Theories of enzyme kinetics: Michaelis-Menten Equation and concepts of Equilibrium and steady-state assumption, Km − Vmax  Transformation of MM equation: Double reciprocal plot, EadieHoffstee plot, Hans-wolf plot  Enzyme Inhibition  Enzyme Inhibition  Enzyme Regulation  Enzyme regulation  Allosteric regulation (ATCase), Feedback inhibition, enzyme induction and repression, regulation by proteolytic cleavage, enzyme regulation by cAMP, covalent modification  Significance and biotechnological applications of Cellulases (Cellulose hydrolysis) and proteases (protein hydrolysate). Amylases (maltodextrin preparation), Lipases (oil industry), Enzymes in diagnosis (dehydrogenase, alkaline phosphatase)	1000111001		cuito. =

#### MSc II (Biotechnology) Semester III

#### BIT-DSC-615: Practicals on Environmental and Pharma Biotechnology

Total Hours: 60 Credits: 2

Course	To acquaint knowledge of different water analysis methods	
objectives	To impart training related toenvironmental microbiology	
	<ul> <li>To familiarize quality activities required in the pharmaceutical industry</li> </ul>	/
Course	After successful completion of this course, students are expected to:	
Outcomes	Execute various test for environmental biotechnology	
	Undertakevarious quality control tests of pharmaceutical products	
	Exemplify microbial analysis in applied experiments	
Sr. No.	Contents	Hours
1	Determination of acidity and alkalinity of water/soil.	4
2	Measuringthe salinity of water/soil sample	4
3	Determination of COD of sewage/ wastewater	4
4	Determination of BOD of sewage/ wastewater	4
5	Estimation of total nitrogen of soil by any suitable method.	4
6	Estimation of chemical parameters of vermicompost/biogas slurry C:N ratio/ P/K/Organic carbon	4
7	Determination of soil microbial activity by CO <sub>2</sub> evolution method	4
8	Determination of total organic matter in soil.	4
9	Determination of pH value of different types of soil/ Determination of water holding capacity of soil.	4
10	Estimation of TS/TDS of the water sample.	4
11	Estimation of penicillin/streptomycin by biological assay	4
12	Estimation of penicillin/streptomycin by chemical assay.	4
13	Determination of Minimum Inhibitory Concentration (MIC) of given Antibiotic	4
14	Sterility testing of commercial pharmaceuticals (Injectable/ Parental/ Ophthalmic)	4
15	Synthesis of nano-particles using Biological process	4

#### MSc II (Biotechnology) Semester III

#### **BIT-DSE-616A: Practicals on Food Biotechnology**

Total Hours: 60 Credits: 2

Course objectives	<ul> <li>To acquaint the student with changes occurring in raw food</li> <li>To inculcate techniques to estimate microbes in a food item</li> </ul>						
	To get aware about the fermentative production of microbial products						
Course	After successful completion of this course, students are expected to:						
Outcomes	Gain skills required to work in the food industries						
	<ul> <li>Learn various microbial techniques used in food industries</li> </ul>						
	Apprise the techniques for the production of microbial fermented food						
Sr. No.	Contents	Hours					
1	Estimation of carbohydrate content of food materials	4					
2	Estimation of protein content of milk/food materials	4					
3	Estimation of the fat content of food samples	4					
4	Determination of microbial count in the food sample by DMC/SPC method	4					
5	Determination of the quality of milk by MBRT assay	4					
6	Determination of efficiency of pasteurisation by phosphatase assay	4					
7	Estimation of mycotoxin in food sample by Thin layer chromatography	4					
8	Isolation of microorganisms from spoiled milk/meat products by suitable culture techniques	4					
9	Isolation of microorganisms from fermented food sample	4					
10	Fermentative production of acetic acid at laboratory scale	4					
11	Fermentative production of alcohol at laboratory scale	4					
12	Analysis of milk adulterations (urea, starch, salt, oil, etc.)	4					
13	Isolation and identification of food poisoning causing <i>S. aureus/ Bacillus cereus/ Clostridium botulinum</i> from a spoiled food sample	4					
14	Isolation and characterization of food fermenting microorganisms from idli batter/Curd.	4					
15	Preparation and analysis of Bread/Jam/Idli/Dhokala	4

# MSc II (Biotechnology) Semester III BIT-DSE-616B Practicals on Enzymology

Total Hours: 60 Credits: 2

Total Hour	5. 00	i cuits. 2
Course	• To study techniques for the detection of various microbial enzymes	
objectives	To understand the effect of various factors on enzyme activity	
	• To purifythe enzymes with different techniques	
	To purify the only likes with different teeninques	
Course	After successful completion of this course, students are expected to:	
Outcomes	• Experiment with screening of microbe for enzyme and enzyme assay	
	• Find the optimum temperature, pH, etc., for enzyme activity.	
	Purify and characterizeenzymes using the appropriate method	
	Turny and characterizating mes asing and appropriate means a	
Sr. No.	Contents	Hours
4	Detection of microbial enzymes from microbes: Catalase, Urease,	4
1	Coagulase.	4
	Detection of microbial enzymes from microbes: Amylase, Lipase,	
2	Gelatinase	4
	Determination of enzyme activity and specific activity of crude enzyme	
3		4
	amylase	
4	Determination of protein content of crude amylase enzyme	4
	Immobilization of yeast cells/enzyme and detection of immobilization	
5		4
	activity	
6	Effect of pH on enzyme activity	4
_	Effect of temperature on enzyme activity	4
7		4
8	Effect of organic solvent on enzyme activity	4
0		_
9	Effect of activator on Enzyme activity	4
	Effect of inhibitors on Enzyme activity	
10	Effect of initiotions on Elizythe activity	4
11	Purification of the enzyme by salting out and dialysis	4

#### MSc II (Biotechnology) Semester III

#### BIT-RM-617: Research Project I

Hours: 12	20 Credits: 4	
Course	1. To give exposure to the students to research culture and technology	
objectives	2. To introduce students to how to select a research topic, plan, perform experin	nents,
	collect and analyze the data  3. To foster self-confidence and self-reliance in the students as they learn to wor think independently	k and
Course	After successful completion of this course, students are expected to:	
outcomes	<ul> <li>Conceive a problem based on published research and conduct a comprehe literature survey.</li> </ul>	ensive
	<ul> <li>Learn handling of instruments, use of chemicals and how to conduct experiments</li> </ul>	et the
	<ul> <li>Learn how to present the project in PowerPoint and answer the queri examiners and the science of writing.</li> </ul>	ies to
Unit	Contents Ho	ours

#### Credit distribution (1 credit for each unit)

- Identification of a research topic, formulation of research problem, objectives, sample size and hypothesis, etc
- Preparation of Outline
- Review of literature
- Bibliography

**Попра 120** 

### The systematic approach towards the execution of the project should be as follows: (Wherever applicable)

- 1. The complete tenure of the research project should be one year. It should be allotted during the third semester and completed in the fourth semester.
- 2. Weekly 8 hours should be allotted to the research project in a regular timetable.
- 3. In the third semester, students will be evaluated based on a credit distribution mentioned above. In the fourth semester, students should perform further research work, collect and analyze the data, compile the results and prepare and submit the final dissertation.
- 4. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 5. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.
- 6. Each research group should have a different research topic with some possible level of novelty.
- 7. The student should select the topic relevant to priority areas of concern or allied subjects with the guidance of supervisor/ head of the department.
- 8. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.
- 9. At the beginning, students should submit the outline of the research work to be carried out in the project. (Writing in order: Title, Aim and objectives, Literature to be collected, Experimental plan or method design, expected outcome etc.)

Cradita 1

- 10. Write and submit a Literature Review Report and Research outline
  - Tentative order for review: Title of the Project, Certificates, Acknowledgment, Abstract and Keywords, Contents, Introduction, Literature Review, Aim of the Project, Materials and Methods, Bibliography/reference etc.
  - Tentative order for research outline: Title page, introduction, background and significance of study, problems to be investigated, objective, hypothesis, chapter scheme, bibliography.
- 11. At the end of the third semester, each student should submit a detailed Literature Review Report and research outline.
- 12. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 13. Students should maintain lab notebooks, and the Supervisor may ask them to submit the midsemester progress report.
- 14. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 15. Three copies of the Literature Review Report, research outline should be prepared (one copy for each department, guide, and student).
- 16. At the end of the semester, the candidate should prepare and present research work using a PowerPoint presentation with modern ICT tools and present the same in front of his/ her respective department during the Internal Examination.
- 17. For external examination the candidate will have to present the research work and face viva voce.
- 18. Students may present their research work in Avishkar/Webinars/Conferences.
- 19. Students should note that plagiarism is strictly prohibited.

#### **Internal examination (40 marks)**: Components of continuous internal assessment:

- Draft Research Outline (10 marks)
- Draft Review of literature (10 marks)
- Working Bibliography (10 marks)
- PowerPoint presentation, and oral examination (10 marks)

#### **External examination (60 marks)** and Components of external assessment:

- Final submitted review report, research outline in bound form at the time of examination (40 marks)
- Overall presentation reflecting the contribution of work, response to questions (20 marks)

# M.Sc. II (Biotechnology) Semester IV

#### MSc II (Biotechnology) Semester IV

#### **BIT-DSC-621: Genomics and Proteomics**

**Total Hours: 60** Credits: 4 Course To acquaint the student with knowledge of Genomics objectives To familiarize with comparative genomics To introduce the concept and types of proteomics To introduce thetechnique used for protein sequence and analysis. Course After successful completion of this course, students are expected to: outcomes Understand the concept and applications of genomics Get aware of techniques and application of comparative genomics. Understand proteomics with bioinformatics tools Learn the techniques used in proteomics Unit Hours **Contents Basic concept of Genomics** Concept of Genomics Genome overview at the level of Chromosome (with model organisms example) Impact of bioinformatics and functional genomics on biology in the 'Post genomic era' Strategies for large scale DNA sequencing- Whole genome analysis Unit I 15 techniques Next-generation sequencing methods; Organization, structure and mapping of genomes (with model organisms example) Structural and functional genomics –Goals, methods, applications Genomic variations: Variation in the human genome, Ethical Consequences of Genomic Variations Next Generation Sequencing: Introduction, Types Comparative genomics **Introduction to Comparative Genomics** Concept of orthologues and paralogues Techniques in comparative genomics: Exon shuffling, horizontal gene transfers, genomes similarity, SNPs, 16S rRNA typing/ sequencing, phylogenetic footprinting Unit II 15 Computational tools for comparative genomics Application of comparative genomics Pharmacogenomics, use of genomes to understand evolution of eukaryotes, track emerging diseases and design new drugs; determining gene location in genome sequence, Human and other vertebrate Genome, Personal genomics The minimal genome and the Barcode of Life.

	Proteomics	
Unit III	Concept, advantages and limitations	
	• Type of proteomics: Structural and functional Proteomics with at least one explanatory example for each	
	<ul> <li>Large scale preparation of proteins and peptides, Merrifield Synthesis of peptides, use of peptides as probes.</li> </ul>	
	<ul> <li>Proteomics and Microarray databases (Preparation, working and analysis) and allied bioinformatics tools.</li> </ul>	15
	Pharmaceutical Applications, Proteomics in drug development and and toxicology, phage antibodies as tools, Glycobiology and	
	Proteomics in plant genetics and breeding.	
	Applications of proteomics to human disease studies, Clinical	
	proteomics  The desired state of the state o	
	Techniques in Proteomics	
	Protein separation techniques     Startegies in matrix identification	
	Strategies in protein identification     2D Cell electrophorogie, Isoselectric Februaine (IFF)	
	o 2D Gel electrophoresis, Isoelectric Focusing (IEF).	
Unit IV	<ul> <li>Mass spectrometry in proteomics —Principle, techniques, components and variations (HPLC, ESI, MALDITOF,FT-MS, MS/MS, Quadrupole) and analysis, applications.</li> </ul>	
	<ul> <li>Edman protein microsequencing</li> </ul>	15
	Protein-protein interactions- experimental and computational	
	o Protein Chip technique, Yeast and Bacterial 2-hybrid systems,	
	Protein-ligand interactions and Protein fragment complement	
	assays, solid ELISA, pull-down assay, and coimmunoprecipitation,	
D. C	Mining of protein databases

#### MSc II (Biotechnology) Semester IV

#### **BIT-DSC-622: Biostatistics and Bioinformatics**

**Total Hours: 60 Credits: 4** Course To impart an understanding of elementary aspects of bio-statistics objectives To learn various statistical techniques applicable to biology To introduce an overview of bioinformatics To analyse the output data to predict a biologically relevant function Course After successful completion of this course, students are expected to: outcomes Apply basic biostatistical techniques for biological data Practice biostatistics for the interpretation of experimental data Use fundamentals of bioinformatics for analysis of database Access and interpret theinformation from databases Unit Hours **Contents** Sampling and central tendency(theoretical concepts) Applications of biostatistics to biological database Concepts: population, sample, probability, central tendency, dispersion, variance **Sampling** types: simple random, stratified, systematic, cluster **Data**: collection (primary and secondary), classification and tabulation of data Unit I 15 Graphical techniques: one-dimensional, two-dimensional, pictograms Graphical presentation of data: histogram, frequency polygon, frequency curve, ogive curve Measures of Central tendency: Mean, Mode, Median Measures of dispersion: range, mean deviation, standard deviation, coefficient of variation, skewness Correlation, Regression, probability, ANOVA (theoretical concepts) **Correlation**: definition, types, methods of measuring • Regression: definition. equation, coefficient, Simple regression, • Analysis of Variance: One and two-way analysis of variance, Intro experiments, Multivariate statistical analysis 15 Unit II Probability: Definition, concepts: experiment, event (simple, compound, mutually exclusive, independent, dependent) Discrete distributions: Bernoulli, Binomial, Poisson. Continuous distributions: Normal, Exponential, sigma limits, and probability coverage. Concepts: Hypothesis testing, t-test, F test, Chi-square test, Design of experiments, multivariate statistics Overview of Bioinformatics **Unit III** 15 Concept of Bioinformatics: definition, scope, application and limitations

	•	Introduction to biological databases	
		<ul> <li>Primary (GenBank, EMBL, SWISS-PROT)</li> </ul>	
		• Secondary (PROSITE, pfam)	
		<ul> <li>Specialized ( GenBank EST and Microarray Gene</li> </ul>	
		Expression)	
		<ul> <li>UNIPROT database</li> </ul>	
	•	Structural databases: PDB, MMDB	
	•	Sequence retrieval system - SRS, ENTREZ, Expasy	
	•	Software for Data Visualization: CN3D,Rasmol, Chimera, SWISS PDB Viewer	
	•	Application of programming Language in Biology: Bioperl, Biojava and R Programming	
	•	Protein structure prediction: Secondary structure (Globular, Transmembrane), 3D Structure prediction (X-ray Crystallography, NMR	
		Spectroscopy)	
	•	Classification of protein Structure: SCOP	
	Uı	nit-IV: Sequence analysis and phylogeny	
		• Sequence analysis: Concept of % Identity, Twilight Zone and mid-	
		night zone	
		Concept of homology, analogy, othology and paralogy	
		<ul> <li>Sequence alignment: pairwise (local, global) and multiple sequence (Clustal W editing and interpretation)</li> </ul>	
Unit IV		<ul> <li>Alignment Algorithms: Dot Matrix and Dynamic Programming, Gap Penalties</li> </ul>	15
		<ul> <li>Introduction to scoring matrices-PAM and BLOSSUM</li> </ul>	
		Database similarity searching: BLAST(Variants and statistical)	
		Significance) FASTA (statistical Significance)	
		<ul> <li>Phylogenetic analysis: Definition, Choice of Molecular Markers</li> </ul>	
		<ul> <li>Phylogenetic tree: Terminology, construction methods(maximum</li> </ul>	
		Parsimony, Maximum Likelihood), Evaluation (Bootstrapping and	
		Jackknifing, Phylogenetic Programs).	
Deferences		buckstilling, I hyrogenetic i rogitalis).

#### MSc II (Biotechnology) Semester IV

#### **BIT-DSE-623B:** Food Technology and Nutrigenomics

Total Hours: 30 Credits: 2

Total Hour		i cuits. 2
Course	To impart an understanding of food spoilage and preservation	
objectives	To understand the concept of nutraceuticals and nutrigenomics	
Course	After successful completion of this course, students are expected to:	
outcomes	<ul> <li>Understand the fundamentals of food spoilage and preservation</li> </ul>	
	Get aware of the role of nutrigenomicsin disease prevention	
Unit	Contents	Hours
	Biochemical changes in raw food and Food processing	
	• <b>Cereals and legumes:</b> composition, mobilization of cereal starches by alpha-amylase, alpha-amylase activity in germinated seeds.	
	• Legumes: composition, effects of germination	
	• Fruits and vegetables: Respiration, initiation of ripening, colour changes, texture	
	Meat and fish: Nature of muscle, conversion of muscle to meat	
Unit I	Browning reactions in food: Non-enzymatic browning, pigment formation, heterocyclic compounds, Ascorbic acid oxidation, inhibition of non-enzymatic browning	15
	<ul> <li>Raw material preparation: cooling crops and carcasses, cleaning foods, sorting and grading and peeling</li> </ul>	13
	<ul> <li>Extraction and separation of food components: centrifugation, filtration, extraction using solvents, membrane separation, effects on food and microorganisms</li> </ul>	
	<ul> <li>Minimal processing methods: high-pressure processing, irradiation, ozone, pulsed electric field processing, processing by removal of heat</li> </ul>	
	<ul> <li>Post processing: packaging, filling and sealing of containers, material handling, storage and distribution</li> </ul>	
	Nutraceuticals and Nutrigenomics	
Unit II	<ul> <li>Concept of nutraceuticals, infant and baby foods, adolescent/ teen age foods, foods for pregnant ladies and nursing mothers, geriatric foods</li> <li>Concept of nutrigenomics</li> </ul>	
	<ul> <li>Food recommended and restricted in metabolic disorders and disturbances: gastrointestinal disorders; fever and infection; liver, gall, bladder and pancreatic disturbances; blood, circulatory and cardiac diseases; urinary and musculoskeletal diseases; allergies.</li> </ul>	15
	Nutrigenomics aspect in vitamins and trace metals	
	<ul> <li>Application of neutrigenomics for disease prevention and better health</li> </ul>

#### MSc II (Biotechnology) Semester IV

#### **BIT-DSE-625: Practicals on Fermentation Technology**

Total Hours: 60 Credits: 2

Course objectives	<ul> <li>To know general considerations for the fermentation process</li> <li>To learn statistical applications in process optimization</li> </ul>	
C	To produce the fermentative product in a laboratory  A.G. To produce the fermentative product in a laboratory  A.G. To produce the fermentative product in a laboratory	
Course	After successful completion of this course, students are expected to:	
Outcomes	Use the knowledge of laboratory fermentations	
	Perform the optimization of the fermentation process	
	Demonstrate various fermentative production of microbial products	
Sr. No.	Contents	Hours
1	Fermentor: demonstration of parts, cleaning, sterilization and assembling	4
2	Aseptic techniques in inoculation of fermenters and Aseptic sampling from fermentors	4
3	Calibration of fermentatorelectrodes/probes	4
4	Production and quantification of biomass (yeast/ Fungal /algae)	4
5	Laboratory-scale fermentation of antibiotics/enzyme	4
6	Down Stream processing with an enzyme: filtrations, centrifugation, TFF	4
7	Optimization of fermentation parameters using one factor at a time (OFAT) design	4
8	Screening of fermentation parameters using a statistical method	4
9	Application of response surface methodology for statistical optimizations of factors.	4
10	Production of fermentation products using chemically defined and crude economical raw material (molasses, agro-waste, food/dairy industry)	4
11	Production of probiotics/yoghurt/curd/buttermilk	4
12	Production, application and efficacy determination of biofertilizer /siderophore (Pseudomonas biofertilizer in talc powder/ Azo/ Rhizo)	4
13	Culturing and characterization of actinomycetes used in the pharmaceutical industry	4
14	Laboratory production of edible mushroom	4
15	Production of fermented products from SSF	4

#### MSc II (Biotechnology ) Semester IV

#### **BIT-DSE-626A: Practical on Professional development**

Total Hours: 60 Credits: 2

Course objectives	<ul> <li>Develop effective communication skills for scientific presentations</li> <li>Enhance career planning and job search strategies.</li> </ul>			
objectives	<ul> <li>Learn the essentials of project writing, business skill</li> </ul>			
Course	After successful completion of this course, students are expected to:			
Outcomes	• Write concise scientific reports and deliver informative presentations.			
	Create professional and targeted CVs and cover letters			
	Be well-prepared to advance in their professional careers			
Sr. No.	Contents	Hours		
1	Prepare the MS PowerPoint-based presentations.	4		
2	Demonstrate the working of the MS Word application.	4		
3	Preparation of graph and table using MS Excel.	4		
4	Preparation of standard operating procedure for the instrument.	4		
5	Preparation of Curriculum Vitae. 4			
6	To learn the interview techniques through a mock activity. 4			
7	Discussion of a topic through group discussion activity/	4		
8	Preparation of application letter for interview/ leave etc.	4		
9	To learn the process of report writing / Effective scientific writing	4		
10	Practical based on Grammar / Vocabulary/plagiarism	4		
11	To learn the technique of communication skills - Speaking	4		
12	Practical based on Self-assessment/goal setting/career planning	4		
13	Practical based on Marketing skill: advertisement/ video making and selling product	4		
14	Practical based on team building/management/leadership skill	4		
15	Case study / analytical - logical thinking skills	4		

#### MSc II (Biotechnology ) Semester IV

#### BIT-DSE-626 B: Practicals on Food technology and neutrigenomics

Total Hours: 60 Credits: 2

Course objectives	<ul> <li>To learn various milk and food testing procedure</li> <li>To know food associated pathogen and spoilage</li> <li>To aware about food safety</li> </ul>	
	After successful completion of this course, students are expected to:	
Outcomes	Examine milk and food samples	
	Infere about quality of various food samples	
	Apply good practices for food safety	
Sr. No.	Contents	Hours
1	Estimation of ascorbic acid in food	4
2	Estimation of calcium (titrimetric method)	4
	Estimation of iron(wong's method)	4
4	Preparation of Aids for Diet Counseling and Planning and preparation of diets in the following disease conditions: • Diabetes Mellitus and hypoglycaemia	4
5	Pasteurization of milk and determination of efficacy using alkaline phosphatase test	4
6	Estimation of mycotoxin in food sample by TLC	4
7	Isolation and identification of microorganism fromspoiled milk.	4
8	Isolation of food borne bacteria/ fungi from food products/ Canned food. (Salmonella/ E. coli/ S. aureous/ coliform etc.)	4
9	Isolation of microorganisms from spoiled bread.	4
10	Isolation of bacteria/ fungi fromspoiled fruits and vegetables.	4
11	Effect of temperature on the spoilage of food products	4
12	Study of strategies for food / milk sampling –liquid/ solid	4
13	Isolation of bacterial probiotics from curd and development of probiotics in vitro	4
14	Description of common practices for food safety in Hazard analysis criteria control points	4
15	Field visit / study tour to milk/ food industry / bakery	4

#### MSc II (Biotechnology) Semester IV

#### BIT- 627: Research Project II

Hours: 18	<u> 30</u>	Credits: 6
Course	1.	To give exposure to the students to research culture and technology
objectives	2.	To introduce students to how to select a research topic, plan, perform experiments,
	3.	collect data and analyze the data  To foster self-confidence and self-reliance in the students as they learn to work and think independently
Course	Aft	er successful completion of this course, students are expected to:
outcomes		<ul> <li>Conceive a problem based on published research and carry out a comprehensive survey of the literature</li> </ul>
		• Learn handling of instruments, use of chemicals and how to conduct the experiments
		<ul> <li>Learn how to present the project in PowerPoint and answer the queries to examiners as well as the science of writing</li> </ul>

## The systematic approach towards the execution of the project should be as follows: (Wherever applicable)

The complete tenure of the research project should be one academic year. It should be allotted during the third semester and completed in the fourth semester.

- 1. Weekly 12 hours should be allotted to the research project in a regular timetable.
- 2. In the fourth semester, students should perform further experimental work, analyze the data and compile the results.
- 3. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 4. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.
- 5. Each research group should have a different research topic with some possible level of novelty.
- 6. The student should select the topic relevant to priority areas of concern or allied subjects.
- 7. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.
- 8. Students are expected to work in line with the research outline and literature review, which was submitted in the third semester.
- 9. Students are expected to learn how to execute the research work systematically and overcome the hurdles. Students will get the opportunity to learn about practical aspects of many characterization techniques or models and further how to effectively employ them in the research work. Students should be able to critically evaluate the literature on the topic, identify the research gaps, plan and perform the experiments, interpret the results, understand the limitations of the work and draw conclusions.
- 10. At the end of the semester, each student should submit a detailed Research Report.
- 11. The format of the final research report shall be as per the guidelines of respective department. (**Example**:Title of the Project, Certificates, Acknowledgment, Abstract and Keywords, Contents, Introduction, Literature Review, Aim and objective, Materials and Methods, Result,

- Data analysis and Discussions, conclusion, limitations, suggestion, future scope, Bibliography, Appendix etc.)
- 12. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 13. Students should maintain lab notebooks, and the supervisor may ask them to submit the midsemester progress report.
- 14. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 15. Three copies of the dissertation should be prepared (one copy for each department, guide, and student).
- 16. At the end of the semester, the candidate should prepare and present research using a PowerPoint presentation using modern ICT tools during the Internal and External Examination.
- 17. Besides writing a dissertation, students are encouraged to write a manuscript/patent if the results obtained are worthy of publication.
- 18. Students may present their research work in Avishkar/Webinars/Conferences.
- 19. Students should note that plagiarism is strictly prohibited.

#### **Internal examination (60 marks)**: Components of continuous internal assessment:

- Literature collected, methodological planning, analysis of data, design and work, progress reports etc (30 marks)
- Presentation in Webinars/Conferences/publication and departmental presentationetc(20 marks)
- Oral examination (10 marks)

#### **External examination (90 marks)** and Components of external assessment:

- Evaluation of dissertation submitted in bound form at the time of examination (60 marks)
- Presentation (PPT format) (15 marks)
- Overall presentation reflecting the contribution of work, Response to questions (15 marks)
