SYLLABUS

M.Sc. II Computer Science

Under Choice Based Credit System (CBCS) and as per NEP-2020 Guidelines

[w.e.f. AcademicYear:2024-25]

Preface

Skilled human resources is a prerequisite in higher education, and it is to be acquired through in-depth knowledge of theoretical concepts and hands-on laboratory methods of the subject. The present syllabus of M.Sc. part II in Computer Science has been prepared per the guidelines of UGC, NEP-2020 and the Government of Maharashtra. This course is designed to provide one with a comprehensive understanding of the principles, theories, and practices that form the foundation of modern computer science. In today's fast-paced and technology-driven world, computer science plays a crucial role in almost every aspect of our lives. From advanced algorithms and artificial intelligence to data management and current computing trends, the field of computer science offers endless possibilities and opportunities for innovation. This program is tailored to equip students with the knowledge and skills needed to excel in the dynamic and everevolving field of computer science. Whether you are a recent graduate or a seasoned professional seeking to enhance student's expertise, this course will challenge and inspire a student to push the boundaries of what is possible.

Throughout this program, students will delve into a wide range of topics, including software development, computer architecture, database systems, machine learning, IoT, and much more. Students will have the opportunity to engage in hands-on projects, collaborate with peers, and learn from experienced faculty members who are leaders in their respective fields. Beyond the technical aspects, this program also emphasizes critical thinking, problem-solving, and effective communication skills. These are essential qualities that will enable students to navigate complex challenges and make meaningful contributions to the field of computer science. Master of Computer Science program will provide students with the necessary foundation and opportunities to excel in their chosen career path. Furthermore, the syllabus is structured to cater to Computer Science's present and future needs in the research field, industrial and environmental sectors, Entrepreneurship, etc., emphasizing imparting hands-on skills. Hence, the curriculum has more experiments that shall run hand-in-hand with theory. The detailed syllabus of each paper is appended with a list of suggested readings.

Program Outcomes (PO) for M.Sc. Program:

Program outcomes associated with an MSc degree are as follows:

- 1. Student has an in-depth understanding of advanced theories, concepts, and methodologies in their field of study.
- 2. Student should demonstrate advanced technical skills and proficiency in utilizing specialized equipment, software, and methodologies relevant to their field of study.
- 3. Students should be capable of critically analyzing complex problems and synthesizing information from various sources.
- 4. Students should be proficient in effectively communicating scientific information to both technical and non-technical audiences. They should be able to present their experimental findings through oral presentations, scientific writing, and appropriate visual aids.
- 5. Students should demonstrate leadership qualities and the ability to work effectively as a team.
- 6. Students should have developed advanced research skills and the ability to independently design and conduct rigorous scientific investigations. They should be able to analyze scientific literature, formulate research questions, develop research plans, collect and analyze data, draw valid conclusions, and learn about IPR.
- 7. Students should understand and adhere to their field's ethical principles and professional standards.
- 8. Students should recognize the importance of continuous learning and professional development. They should have the skills and motivation to stay updated with advancements in their field, engage in lifelong learning, and pursue further academic or professional opportunities.

Program Specific Outcome PSO (M.Sc. Computer Science):

After completion of this course, students are expected to learn/understand the:

No.	PSO
1	Acqire a deep understanding of advanced concepts, theories and principles in various areas of
	computer science.
2	Attain specialized knowledge and skills in a specific area of computer science.
3	Develop advanced problem-solving skills by applying theoretical knowledge and practical
	techniques to address complex challenges.
4	Acquire advanced programming and software development skills, including proficiency in
	multiple programming languages.
5	Foster critical thinking abilities to analyze, evaluate anf assess computer science problems,
	theories and methodologies.
6	Foster a commitment to lifelong learning and professional development by staying updated
	with emerging techniques and industry practices.

Credit distribution structure for two years/one-year PG MSc programme

Level	Sem	Major (Core	e) Subjects	Minor Subjects	OJT/Int, RP	Cumulative Credits/Sem	Degree/ Cumulative
		Mandatory (DSC)	Elective (DSE)				Cr.
	I	DSC-1 (4T) DSC-2 (4T) DSC-3 (4T) DSC-4 (2P)	DSE-1(2T) A/B DSE-2(2P) A/B	RM (4T)		22	First-year PG OR One year PG diploma after
6.0	п	DSC-5 (4T) DSC-6 (4T) DSC-7 (4T) DSC-8 (2P)	DSE-3(2T) A/B DSE-4(2P) A/B		OJT/Int (4)	22	3 years UG
	Cum. Cr.	28	8	4	4	44	
		Exit option: PG	diploma (44 C	Credits) after t	hree-year UG deg	gree	
	III	DSC-9 (4T) DSC-10 (4T) DSC-11 (4T) DSC-12 (2P)	DSE-5(2T) A/B DSE-6(2P) A/B		RP (4)	22	Second-year PG after 3 years UG OR

6.5	IV	DSC-12 (21) DSC-13 (4T) DSC-14 (4T) DSC-15 (2P) DSC-16 (2P)	DSE-7(2T) A/B DSE-8 (2P) A/B		RP (6)	22	PG degree after 4 years UG

2 Years-4 Sem. PG Degree (80-88 credits) after Three Year UG Degree or 1 Year-2 Sem PG Degree (40-44 credits) after Four Year UG Degree

Sem- Semester, DSC- Department Specific Course, DSE- Department Specific Elective, T- Theory, P- Practical,

RM- Research Methodology, OJT- On Job Training, Int- Internship, RP- Research Project,

Cum. Cr. : Cumulative Credits

Multiple Entry and Multiple Exit options:

The multiple entry and exit options with the award of UG certificate/ UG diploma/ or three-year degree depending upon the number of credits secured;

Levels	Qualification Title	Credit Requirements		Semester	Yea
		Minimum	Maximum		r
6.0	One-year PG Diploma program	40	44	2	1
	after 3 Yr Degree				
6.5	Two-year master's Degree program	80	88	4	2
	After 3-Yr UG				
	Or PG Degree after 4- Yr UG				

Examination Pattern for MSc

Theory Question Paper Pattern:

- 60 (External) +40 (Internal) for 4 credits
 - o External examination will be of three hours duration
 - There shall be 5 questions, each carrying equal marks (12 marks each), while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 3 out of 4 sub-questions; each 4 marks
 - o Q 2, Q3, Q4 and Q5 Attempt any 2 out of 3 sub-question; each 6 marks.
- 30 (External) +20 (Internal) for 2 credits
 - o External examination will be of 1½ hours duration
 - There shall be 3 questions Q1 carrying 6 marks and Q2, Q3 carrying 12 marks each. while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 2 out of 3 sub-questions; each 3 marks
 - o Q 2 and Q3 Attempt any 2 out of 3 sub-question; each 6 marks.

Rules of Continuous Internal Evaluation:

The Continuous Internal Evaluation for theory papers shall consist of two methods:

- **1. Continuous & Comprehensive Evaluation (CCE):** CCE will carry a maximum of 30% weightage (30/15 marks) of the total marks for a course. Before the start of the academic session in each semester, the subject teacher should choose any three assessment methods from the following list, with each method carrying 10/5 marks:
 - i. Individual Assignments
 - ii. Seminars/Classroom Presentations/Quizzes
 - iii. Group Discussions/Class Discussion/Group Assignments
 - iv. Case studies/Case lets
 - v. Participatory & Industry-Integrated Learning/Field visits
 - vi. Practical activities/Problem Solving Exercises
 - vii. Participation in Seminars/Academic Events/Symposia, etc.
 - viii. Mini Projects/Capstone Projects
 - ix. Book review/Article review/Article preparation
 - x. Any other academic activity
 - xi. Each chosen CCE method shall be based on a particular unit of the syllabus, ensuring that three units of the syllabus are mapped to the CCEs.
- **2. Internal Assessment Tests (IAT):** IAT will carry a maximum of 10% weightage (10/5 marks) of the total marks for a course. IAT shall be conducted at the end of the semester and will assess the remaining unit of the syllabus that was not covered by the CCEs. The subject teacher can decide which units will be assessed using CCEs and which unit will be assessed based on IAT.

The overall weightage of Continuous Internal Evaluation (CCE + IAT) shall be 40% of the total marks for the course. The remaining 60% of the marks shall be allocated to the semester-end examinations.

The subject teachers must communicate the chosen CCE methods and the corresponding syllabus units to the students at the beginning of the semester to ensure clarity and proper preparation.

Practical Examination Credit 2: Pattern (30+20)

External Practical Examination (30 marks):

- Practical examination shall be conducted by the respective department at the end of the semester.
- Practical examination will be of 3 hours and shall be conducted as scheduled.
- There shall be 05 marks for journal and viva voce. A certified journal is compulsory to appear for practical examination.
- The practical examination will be of a minimum of 3 hours duration and shall be conducted as per schedule for 2 consecutive days in case of practical where incubation conditions and allied aspects are essential.

Internal Practical Examination (20 marks):

- Internal practical examination of 10 marks will be conducted by the department as per the schedule given.
- For internal practical examination, students must produce the laboratory journal of practical completed along with the completion certificate signed by the concerned teacher and department head.
- There shall be continuous assessment of 30 marks based on student performance throughout the semester. This assessment can include quizzes, group discussions, presentations and other activities the faculty assigns during regular practical. For details, refer to internal theory examination guidelines.
- Finally, 40 (10+30) students' performance will be converted into 20 marks.

CS-DSC-613: Compiler Construction

Total Hours: 60 Credits: 4

Course	• To apply the theory of language translation introduced in prerequisite cour	ses to
objectives	build compilers and interpreters.	
	• To build translators from scratch and using compiler generators.	
	• To identify and explore main issues of design of translators.	
	To construct compiler/interpreter for a small language	
Course	Students will be able to	
outcomes	• Understand the structure of compilers	
	 Design compiler for small application 	
	Learn compiler construction theory	
Unit	Content	Hours
Unit I	Compiler structure	10
	 Analysis-synthesis model of compilation 	
	o various phases of a compiler	
	 tool-based approach to compiler construction 	
Unit II	Lexical and Syntax Analysis	20
	 Lexical Analysis 	
	 Lexical Analysis Interface with input, parser and symbol table, token, lexeme and 	
	patterns,	
	 Difficulties in lexical analysis, Error reporting, Implementation, 	
	Regular definition, Transition diagrams, LEX.	
	o Syntax Analysis	
	o CFGs, ambiguity, associativity, precedence, top down parsing,	
	recursive descent parsing, transformation on the grammars,	
	predictive parsing, bottom up parsing, operator precedence	
	grammars	
	o LR parsers (SLR, LALR, LR)	
	o YACC.	
	o Syntax directed definitions: inherited and synthesized attributes,	
	dependency graph, evaluation order, bottom up and top down	
	evaluation of attributes, L- and S-attributed definitions. O Type checking: type system, type expressions, structural and name 8	
	o Type checking: type system, type expressions, structural and name 8 equivalence of types, type conversion, overloaded functions and	
	operators, polymorphic functions.	
Unit III	Run time system	10
	 Storage organization 	
	o activation tree	
	o Activation record	

	o Parameter passing, symbol table	
	Dynamic storage allocation.	
Unit IV	Code Generation and Instruction Selection	20
	 Intermediate representations, translation of declarations, assignments, control flow, Boolean expressions and procedure calls. Implementation issues 	
	 Issues in code generation and instruction selection, basic blocks and flow graphs, register allocation, code generation, dag representation of programs, code generation from dags, peep hole optimization, code generator generators, specifications of machine.

M.Sc. II (Computer Science)

Semester-III CS-DSE-614 A: Data Mining-I

Total Hours: 30 Credits: 2

	Tituis. 30 Cieuis. 2	
Course	To understand the concepts of Data Mining	
objectives	To understand and learn importance of data pre-processing.	
	To learn association mining	
Course	Student who learns this course will be able to	
outcomes		
	Know data mining functionalities and applications	
	preprocess data	
	Extract interesting patterns from large amounts of data	
Unit	Content	Hours
Unit I	Introduction to Data Mining	10
	 Definition of Data mining 	
	Importance of Data Mining	
	 Knowledge Discovery using Data Mining 	
	 Kinds of Data Repositories 	
	O Data Mining functionalities	
	Classification of Data Mining Systems	
	Basic Data Mining task	
	O Data Mining Issues	
	o Data Mining Applications	
Unit II	UNIT - II Data Warehousing:	10
	o What is Data Warehouse?	
	 Characteristics of Datawarehouse, 	
	 Applications of Datawarehouse, 	
	 Difference between OLTP and OLAP, 	
	 Multidimensional Data Model, 	
	 Data Warehouse Architecture, 	
	o Integration of a Data Mining System witha Database or	
	DatawarehouseSystem	
Unit III	Data Pre-processing	05
	 What is Data Preprocessing 	
	 Need for pre-processing of the data 	
	 Descriptive Data Summarization 	
	o Data Cleaning	
	 Data Integration and transformation 	
	o Data Reduction	
	Data discretization and concept hierarchy generation	
Unit IV	Association Rule Mining	05
	o Frequent Patterns- Frequent itemset, Sequential Pattern, Structured	
	Pattern	

	0	Efficient and Scalable Frequent Item set Mining Methods	
	0	Mining Various Kinds of Association Rules	
	0	Association Mining to Correlation Analysis	
	0	Constraint-Based Association Mining.	
Study	•	Data Mining – Concepts and Techniques – Jiawei Han & Dicheline	
Resources		Kamber, 3 rd Edition Elsevier	
	•	Data Mining T- Charu C. Aggarwal The Textbook, Springer	
	•	Data Mining Practical Machine Learning Tools and Techniques- Ian H. Witten

CS-DSE-614 B: NoSQL-I

Total	Hours: 30 Credits: 2		
Course	• Explore the origins of NoSQL databases and the characteristics that distin	guish	
objectives	them from traditional relational database management systems.	6	
	• Understand the architectures and common features of the main types of NoSQL		
	databases (key-value stores, document databases, column-family stores, graph		
	databases)	- P	
	 Discuss the criteria that decision makers should consider when choosing be 	etween	
	relational and non-relational databases and techniques for selecting the No		
	database that best addresses specific use cases) S Q L	
Course	After successful completion of this course, students are expected to:		
outcomes	•	ments	
	 Differentiate and identify right database models for real time applications 	Henris	
	 Outline Key value architecture and characteristics 		
	 Design Schema and implement CRUD operations, distributed data operations 	ons	
	 Compare data ware housing schemas and implement various column store 		
	internals	,	
	 Choose and implement Advanced columnar data model functions for the results. 	eal time	
	applications	car time	
Unit	Content	Hours	
	INTRODUCTION TO NOSQL CONCEPTS	10	
UIII I	INTRODUCTION TO NOSQL CONCEPTS	10	
	o Data base revolutions: First generation, second generation, third		
	generation,		
	o Managing Transactions and Data Integrity, ACID and BASE for		
	reliable database transactions		
	 Speeding performance by strategic use of RAM, SSD, and disk 		
	o Achieving horizontal scalability with Data base sharding, Brewers		
	CAP theorem		
Unit II	NOSQL DATA ARCHITECTURE PATTERNS	10	
	 NoSQL Data model: Aggregate Models 		
	Document Data Model-		
	Key-Value Data Model		
	 Columnar Data Model, 		
	Graph Based Data Model		
	 Graph Data Model, 		
	 NoSQL system ways to handle big data problems, 		
	o Moving Queries to data, not data to the query, hash rings to distribute		
	the data on clusters, replication to scale reads,		
	 Database distributed queries to Data nodes. 		
Unit III	KEY VALUE DATA STORES	05	
Unit III	KEY VALUE DATA STORES	05	

	0	From array to key value databases, Essential features of key value	
		Databases, Properties of keys,	
	0	Characteristics of Values, Key-Value Database	
	0	Data Modeling Terms,	
	0	Key-Value Architecture and implementation Terms,	
	0	Designing Structured Values,	
	0	Limitations of KeyValue Databases,	
	0	Design Patterns for Key-Value Databases,	
	0	Case Study: Key-Value Databases for Mobile Application	
		Configuration	
Unit IV		MongoDB	05
	0	The Document Data Model	
	0	Documents and Collections	
	0	MongoDB Use Cases	
	0	Embedded Data Models	
	0	Normalized Data	
	0	Replication via Replica Sets	
	0	MongoDB Design	
	0	MongoDB and the CAP Theorem	
	0	The MongoDB Data Manipulation Language	
	0	Transactions, Atomicity, and Documents	
	0	Durability and Journaling	
	0	Batch Processing and Aggregation	
	0	Indexing	
	0	Auto-Sharding, Shard Keys, and Horizontal Scalability	
	0	Writing to Shards

CS-DSC-615: Practical on Current Computing Trends (ASP.NET)

Total Hours: 60 Credits: 2

Total Hours:	60 Credit	s: 2
Course	To understand and learn:	
objectives	To provide insight into .NET technologies for web	
	programming and enable them design and develop inter	active
	and responsive web applications.	
	To explain learners the insights into the efficient usage of the control of	of .NET
	technologies their facilities	
	 To acquire knowledge of web development 	
Course	After successful completion of this course, students are expected	d to:
Outcomes	Acquire practical knowledge of .NET technologies fram	nework
	 Implement various controls for creating a web Application 	on
	 Understand the security aspects of web Application. 	
Sr. No.	Content	Hours
1	Demonstrate Page Life Cycle of ASP.NET.	4
2	Demonstrate the use of HTML and Web Server Controls for	4
2	Job Portal	4
_	Create a Registration Form to demonstrate the use of various	
3	validation controls.	4
_	Demonstrate DropDown List box, CheckButtonList,	_
4	RadioButtonList controls.	4
5	Demontrate the use of Calender and Adrotator Control	4
6	Demonstrate State Management features of ASP.NET using	4
U	sample shopping cart application.	4
_	Demonstrate Authorization/Authentication using Login	_
7	controls	4
8	Demonstrate the use of Master Pages with applying Themes.	4
9	Demonstrate the use of Nested Master Pages.	4
10	Demonstrate Properties of website navigation controls.	4
11	Demonstrate editing process in DataList controls. Make use	4
11	of necessary templates for proper visual appearance.	-
12	Create a web application to display Data binding using	4

CS-DSE-616 A: Practical on Data Mining-I

Total Hours: 60 Credits: 2

		s: 2
Course	To understand the concepts of Data Mining software	
objectives	• To understand practical concepts of data pre-processing.	
	• To learn association mining	
Course	Student who learns this course will be able to	
Outcomes		
	• perform data analysis using WEKA software	
	• preprocess data using different algorithms	
	Extract interesting patterns from large amounts of data	
Sr. No.	Content	Hours
1	Installation of Weka open-source software for data mining	4
2	Introduction to the Weka software interface	4
3	Create a new ARFF and csv data file	4
4	Opening file from Local machine and Web site	4
5	Apply filters for Removing selected attributes from data	4
6	Apply filters for Removing Duplicates Records from data	4
7	Apply filters for handling missing values from data	4
8	Apply filters for Data Discretization	4
9	Applying filters for Attribute transformation	4
10	Applying filters for normalization	4
11	Applying filters for Attribute selection	4
12	Generate Association Rules using the Apriori Algorithm	4
13	Generating association rules using FP-growth algorithm	4
14	Case study on Association rule generation for Market basket analysis	4
15	Case study on Association rule generation for Medical Diagnosis dataset (e.g. breast cancer)	4

CS-RP-617: Research Project - I

Total Hours: 120 Credits: 4

Course Objectives

- 1. To give exposure to the students to research culture and technology
- 2. To introduce students to how to select a research topic, plan, perform experiments, collect and analyze the data
- **3.** To foster self-confidence and self-reliance in the students as they learn to work and think independently

Course outcomes

After successful completion of this course, students are expected to:

- Conceive a problem based on published research and conduct a comprehensive literature survey.
- Plan and carry out the tasks in the given framework of the dissertation and present the work in writing and viva.
- Learn handling of instruments, use of chemicals and how to conduct the experiments
- Learn how to present the project in PowerPoint and answer the queries to examiners and the science of writing.

Credit distribution (1 credit for each unit)

- Identification of a research topic, formulation of research problem, objectives, sample size and hypothesis, etc
- Preparation of Outline
- Review of literature
- Bibliography

The systematic approach towards the execution of the project should be as follows:

(Wherever applicable)

- 1. The complete tenure of the research project should be one year. It should be allotted during the third semester and completed in the fourth semester.
- 2. Weekly 8 hours should be allotted to the research project in a regular timetable.
- 3. In the third semester, students will be evaluated based on a credit distribution mentioned above. In the fourth semester, students should perform further research work, collect and analyze the data, compile the results and prepare and submit the final dissertation.
- 4. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 5. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.

- 6. Each research group should have a different research topic with some possible level of novelty.
- 7. The student should select the topic relevant to priority areas of concern or allied subjects with the guidance of supervisor/ head of the department.
- 8. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.
- 9. At the beginning, students should submit the outline of the research work to be carried out in the project. (Writing in order: Title, Aim and objectives, Literature to be collected, Experimental plan or method design, expected outcome etc.)
- 10. Write and submit a Literature Review Report and Research outline
 Tentative order for review: Title of the Project, Certificates, Acknowledgment, Abstract and
 Keywords, Contents, Introduction, Literature Review, Aim of the Project, Methodology,
 Bibliography/reference etc.
 - Tentative order for research outline: Title page, introduction, background and significance of study, problems to be investigated, objective, hypothesis, chapter scheme, bibliography.
- 11. At the end of the third semester, each student should submit a detailed Literature Review Report and research outline.
- 12. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 13. Students should maintain lab notebooks, and the Supervisor may ask them to submit the mid-semester progress report.
- 14. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 15. Three copies of the Literature Review Report, research outline should be prepared (one copy for each department, guide, and student).
- 16. At the end of the semester, the candidate should prepare and present research work using a PowerPoint presentation with modern ICT tools and present the same in front of his/ her respective department during the Internal Examination.
- 17. For external examination the candidate will have to present the research work and face viva voce.
- 18. Students may present their research work in Avishkar/Webinars/Conferences.
- 19. Students should note that plagiarism is strictly prohibited.

Internal examination (40 marks): Components of continuous internal assessment:

- Draft Research Outline (10 marks)
- Draft Review of literature (10 marks)
- Working Bibliography (10 marks)
- PowerPoint presentation, and oral examination (10 marks)

External examination (60 marks) and Components of external assessment:

- Final submitted review report, research outline in bound form at the time of examination (40 marks)
- Overall presentation reflecting the contribution of work, response to questions (20 marks)

Machine Learning: A probabilistic perspective, Kevin Murphy The Elements of Statistical Learning: Data Mining, Inference and Prediction, Trevor Hastie, Robert Tibshirani, Jerome Friedman

CS-DSC-625: Practical on Data Science

Total Hours: 60 Credits: 2 Course To provide strong foundation for data science and application area related to objectives To understand the underlying core concepts and emerging technologies in data science. To explore raw data in needed form. Course After successful completion of this course, students are expected to: Outcomes understand practical data analysis techniques for handling large data understand various machine learning algorithms used in data science process visualize and present the inference using various tools using PYTHON libraries. learn to think through the ethics surrounding privacy, data sharing and algorithmic decision-making Sr. No. Content Hours Study various platforms used for data science. 1 4 2 Download, Install and explore the features of Numpy 4 3 Download, Install and explore the features of Pandas 4 4 Download, Install and explore the features of Scikit-learn. 4 5 4 Demonstrate the working of array with the help of Numpy Package. Demonstrates working with Pandas dataframe 6 4 Demonstrates reading data from text, excel file and the web and explore 4 various commands for descript analysis of the Iris dataset. 8 Write a program to compute summary statistics such as mean, median, 4 mode, standard deviation and variance of the given different types of data using Python. 9 Write a python program to calculate the variance. 4 10 Develop python program for Basic plots using Matplotlib 4 11 Write a python program for correlation with scatter plot 4 12 Implement Linear Regression using Python. 4 13 Implement naïve bays classifier using Python. 4 14 Implement SVM using Python. 4 15 Study of Bokeh library Study Data Science from Scratch: First Principles with Python, Joel Grus, O'Reilly, Resources 1st edition, 2015. • Doing Data Science, Straight Talk from the Frontline, Cathy O'Neil, Rachel Schutt, O' Reilly, 1st edition, 2013. Mining of Massive Datasets, Jure Leskovec, AnandRajaraman, Jeffrey David Ullman, Cambridge University Press, 2nd edition, 2014.

CS-DSE-626 A: Practical on Data Mining-II

Total Hours: 60 Credits: 2

Course	Learn to apply classification techniques	
objectives	Learn to apply clustering techniques	
	Learn advanced data mining	
Course	After successful completion of this course, students are expected to:	
Outcomes	 Apply classification techniques on the given datasets 	
	Use accuracy measures	
	 Apply Clustering techniques on the given datasets 	
Sr. No.	Content	Hours
1	Build a Decision Tree by using J48 algorithm	4
2	Apply Naïve bayes classification on data set	4
3	Apply Rule Based Classification on data set	4
4	Apply SVM on dataset	4
5	Apply kNN classifier on dataset	4
6	Apply multiclass classifier on dataset	4
7	Apply SVM and kNN on Breast-Cancer dataset and compare the results	4
	using accuracy and error measures	
8	Apply Rule Based Classification and Decision Tree and Compare the	4
	results	
9	Apply Decision Tree, SVM and kNN on dataset and Compare the results	4
10	Apply linear regression on dataset	4
11	Apply non-linear regression on dataset	4
12	Apply k-means clustering on a given data set	4
13	Apply Hierarchical Clustering techniques on dataset	4
14	Apply Density based clustering method on dataset	4
15	Apply Expectation maximisation clustering method on dataset	4
Study	 Jure Leskovek, AnandRajaraman, Jeffrey Ullman, Mining of Massive 	Datasets.

CS-DSE-626 B: Practical on NoSQL-II

Total Hours: 60 Credits: 2 Course To learn the document database such as MongoDB objectives To analyze different kind of data using MonogoDB To write the quires for data extraction. **CourseOutc** After successful completion of this course, students are expected to: omes Describe the NoSQL data architecture patterns using MongoDB Use NoSQL to manage Big Data. Develop NoSQL desktop and cloud database solutions Sr. No. **Content** Hours Download sample restaurant dataset from MongoDB and solve the assignment 1-5.... 1 4 Write a MongoDB query to display all the documents, fileds in the collection restaurants. Write a MongoDB query to display i) all the restaurant, 2 4 ii) first 5 and next 5 after skipping first 5 which are in the borough Bronx Write a MongoDB guery to find the restaurants who achieved a score: i) More than 90 3 4 ii) More than 80 but less than 100 iii) Grade with score of 2 and grade with score of 6 Grade with score of 2 and grade with score of 6 and iv) located in borough of Manhattan Write a MongoDB query to find i) the average score for each restaurant. 4 4 ii) Lowest score for each restaurant iii) Highest score for each restaurant Write a MongoDB query to find i) count of restaurants in each borough. ii) count of restaurants that received a grade of 'A' for each 5 4 cuisine. iii) find the number of restaurants that have been graded in each month of the year. DownloadSample listingsAndReviews Dataset from 6 4

	MongoDand and solve the assignment 6-10	
	Find the thefollowing of the first record in the listingsAndReviews collection.	
	insungs/ thateviews concetion.	
	i) price per night	
	ii) Retrieve the cleaning fee	
	iii) host_name, host_location, host_about	
	Find the the following of the first record in the listings And Reviews collection	
-	Reviews concerton	4
7	i) No. of bedroom	4
	ii) No. of guest	
	iii) to check whether the host have a profile picture	
8	Find the top 10 most reviewed listings with listing_url, name,	4
	country, review_scoresin the listingsAndReviews collection.	7
	Retrieve all documents with name, address, reviewer_name,	
	review_scores_ratingin the listingsAndReviewscollection	
9	i) that have a number_of_reviews field is equal to 0	4
	ii) where the host_is_superhost field is equal to true	
	iii) where the coordinates field is not null	
	Find all listings with listing_url, name, property_type, bed, price,	
10	security_deposit in the listingsAndReviews collection that have a	4
10	price greater than \$500 and a security deposit of \$1000 or more.	•
	DownloadSample movie Dataset from MongoD and and solve	
	the assignment 11-15	
	Find all movies with full information from the 'movies'	
11	collection that	4
	. 1 1: 4 1992	-
	i) released in the year 1893.ii) have a runtime greater than 120 minutes.	
	iii) were directed by "William K.L. Dickson" and include	
	complete information for each movie.	
	Write a query in MongoDB to find the movie with the highest	
12	IMDb rating and viewer rating on Tomatoes from the 'movies'	4
12	collection.	-
	Find the movies released in the year with the highest average	
13	IMDb rating from the 'movies' collection in MongoDB.	4
14	Find from the 'movies' collection in MongoDB with the most	4
1=	common genre among the movies.	
15	Find all movies with title, languages, released, directors, writers,	4

	awards, year, genres, runtime, cast, countries from the 'movies' collection in MongoDB that have at least one nomination.

CS-RP-627: Research Project - II

Hours: 180 Credits: 6
Course Objectives

- 1. To give exposure to the students to research culture and technology
- 2. To introduce students to how to select a research topic, plan, perform experiments, collect data and analyze the data
- **3.** To foster self-confidence and self-reliance in the students as they learn to work and think independently

Course outcomes

After successful completion of this course, students are expected to:

- 1. Conceive a problem based on published research and conduct a comprehensive literature survey.
- 2. Plan and carry out the tasks in the given framework of the dissertation and present the work in writing and viva.
- 3. Learn handling of instruments, use of chemicals and how to conduct the experiments
- 4. Learn how to present the project in PowerPoint and answer the queries to examiners and the science of writing.

The systematic approach towards the execution of the project should be as follows:

(Wherever applicable)

- 1. The complete tenure of the research project should be one academic year. It should be allotted during the third semester and completed in the fourth semester.
- 2. Weekly 12 hours should be allotted to the research project in a regular timetable.
- 3. In the fourth semester, students should perform further experimental work, analyze the data and compile the results.
- 4. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 5. The student should clearly mention the need of project, database(s), files required for the project, software used for the project, reasons for selection of that software, inputs required, outputs produced etc.
- 6. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.
- 7. Each research group should have a different research topic with some possible level of novelty.
- 8. The student should select the topic relevant to priority areas of concern or allied subjects.
- 9. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.

- 10. Students are expected to work in line with the research outline and literature review, which was submitted in the third semester.
- 11. Students are expected to learn how to execute the research work systematically and overcome the hurdles. Students will get the opportunity to learn about practical aspects of many characterization techniques or models and further how to effectively employ them in the research work. Students should be able to critically evaluate the literature on the topic, identify the research gaps, plan and perform the experiments, interpret the results, understand the limitations of the work and draw conclusions.
- 12. At the end of the semester, each student should submit a detailed Research Report.
- 13. The format of the final research report shall be as per the guidelines of respective department. (**Example**: Title of the Project, Certificates, Acknowledgment, Abstract and Keywords, Contents, Introduction, Literature Review, Aim and objective, Methodology, Results and Discussions, conclusion, limitations, suggestion, future scope, Bibliography, Appendix etc.)
- 14. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 15. Students should maintain lab notebooks, and the supervisor may ask them to submit the mid-semester progress report.
- 16. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 17. Three copies of the dissertation should be prepared (one copy for each department, guide, and student).
- 18. At the end of the semester, the candidate should prepare and present research using a PowerPoint presentation using modern ICT tools during the Internal and External Examination.
- 19. Besides writing a dissertation, students are encouraged to write a manuscript/patent if the results obtained are worthy of publication.
- 20. Students may present their research work in Avishkar/Webinars/Conferences.
- 21. Students should note that plagiarism is strictly prohibited.

Internal examination (60 marks): Components of continuous internal assessment:

- Literature collected, methodological planning, analysis of data, design and work, progress reports etc (30 marks)
- Presentation in Webinars/Conferences/publication and departmental presentation etc (20 marks)
- Oral examination (10 marks)

External examination (90 marks) and Components of external assessment:

- Evaluation of dissertation submitted in bound form at the time of examination (60 marks)
- Presentation (PPT format) (15 marks)
- Overall presentation reflecting the contribution of work, Response to questions (15 marks)
