Date:- 01/08/2024

NOTIFICATION

Sub :- CBCS Syllabi of M. Sc. in Microbiology (Sem. III & IV)

Ref. :- Decision of the Academic Council at its meeting held on 27/07/2024.

The Syllabi of M. Sc. in Microbiology (Third and Fourth Semesters) as per **NATIONAL EDUCATION POLICY – 2020 (2023 Pattern)** and approved by the Academic Council as referred above are hereby notified for implementation with effect from the academic year 2024-25.

Copy of the Syllabi Shall be downloaded from the College Website (www.kcesmjcollege.in)

Sd/-Chairman, Board of Studies

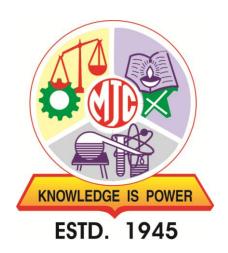

To:

- 1) The Head of the Dept., M. J. College, Jalgaon.
- 2) The office of the COE, M. J. College, Jalgaon.
- 3) The office of the Registrar, M. J. College, Jalgaon.

SYLLABUS

M.Sc. IIMicrobiology

Under Choice Based Credit System (CBCS) and

as per NEP-2020 Guidelines

[w.e.f. AcademicYear:2024-25]

Preface

Skilled human resources is a prerequisite in higher education, and it is to be acquired through in-depth knowledge of theoretical concepts and hands-on laboratory methods of the subject. The present syllabus of M.Sc. part II in Microbiology has been prepared per the guidelines of UGC, NEP-2020 and the Government of Maharashtra. It aims to cultivate theoretical and practical knowledge of different fields of Microbiology among the students. The contents of the syllabus have been prepared to accommodate the fundamental aspects and advanced developments in various disciplines of Microbiology and to complement the needs of various applied sectors of Microbiology. Besides this, the students will be enlightened with knowledge in the newer areas of, Biomolecules and microbial metabolism, molecular biology and microbial genetics, virology, immunology, cell biology, environmental microbiology and extremophiles, fermentations, IPR, Patents, bioethics etc. The overall curriculum of one/ two-year also covers various advanced biotechniques and Bioinstrumentations such as bioinformatics. immunotechniqes, tissue culture and biosensors etc. Furthermore, the syllabus is structured to cater to Microbiology's present and future needs in the research field, industrial and environmental sectors, Entrepreneurship, etc., emphasizing imparting hands-on skills. Hence, the curriculum has more experiments that shall run hand-in-hand with theory. The detailed syllabus of each paper is appended with a list of suggested readings.

Program Outcomes (PO) for M.Sc. Program:

Program outcomes associated with an MSc degree are as follows:

- 1. Student has an in-depth understanding of advanced theories, concepts, and methodologies in their field of study.
- 2. Student should demonstrate advanced technical skills and proficiency in utilizing specialized equipment, software, and methodologies relevant to their field of study.
- 3. Students should be capable of critically analyzing complex problems and synthesizing information from various sources.
- 4. Students should be proficient in effectively communicating scientific information to both technical and non-technical audiences. They should be able to present their experimental findings through oral presentations, scientific writing, and appropriate visual aids.
- 5. Students should demonstrate leadership qualities and the ability to work effectively as a team.
- 6. Students should have developed advanced research skills and the ability to independently design and conduct rigorous scientific investigations. They should be able to analyze scientific literature, formulate research questions, develop research plans, collect and analyze data, draw valid conclusions, and learn about IPR.
- 7. Students should understand and adhere to their field's ethical principles and professional standards.

8. Students should recognize the importance of continuous learning and professional development. They should have the skills and motivation to stay updated with advancements in their field, engage in lifelong learning, and pursue further academic or professional opportunities.

Program Specific Outcome PSO (M.Sc. Microbiology):

After completion of this course, students are expected to learn/understand the:

No.	PSO
1	Advance techniques in microbiology, enzymology and purification of biomolecules.
2	Biochemistry of microbes concerningthe metabolism of biomolecules and bio-energetics.
3	Molecular biology for DNA replication, central dogma and gene regulation.
4	Concepts in cell biology, microbial genomics and microbial diversity.
5	Principle and applications of various bio-analytical tools and immune techniques.
6	Applications of microbes in food, agriculture, pharmaceutical, fermentation and environmental sectors.
7	Newer and applied areas such as applications of extremophiles, bioinformatics, and biostatistics.
8	Research methodology, IPR, Bioentreprenuership, bioethics and professional development.

Credit distribution structure for two years/one-year PG MSc programme

Level	Sem	Major (Core	e) Subjects	Minor Subjects	OJT/Int, RP	Cumulative Credits/Sem	Degree/ Cumulative

Cum. Cr. : Cumulative Credits

Multiple Entry and Multiple Exit options:

The multiple entry and exit options with the award of UG certificate/ UG diploma/ or three-year degree depending upon the number of credits secured;

Levels	Qualification Title	Credit Requ	Credit Requirements		
		Minimum	Minimum Maximum		
6.0	One-year PG Diploma program	40	44	2	1
	after 3 Yr Degree				
6.5	Two-year master's Degree program	80	88	4	2
	After 3-Yr UG				
	Or PG Degree after 4- Yr UG				

Examination Pattern for MSc

Theory Question Paper Pattern:

- 60 (External) +40 (Internal) for 4 credits
 - o External examination will be of three hours duration
 - o There shall be 5 questions, each carrying equal marks (12 marks each), while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 3 out of 4 sub-questions; each 4 marks
 - o Q 2, Q3, Q4 and Q5 Attempt any 2 out of 3 sub-question; each 6 marks.
- 30 (External) +20 (Internal) for 2 credits
 - o External examination will be of 1½ hours duration
 - o There shall be 3 questions Q1 carrying 6 marks and Q2, Q3 carrying 12 marks each. while the tentative pattern of question papers shall be as follows;
 - o Q1 Attempt any 2 out of 3 sub-questions; each 3 marks
 - o Q 2 and Q3 Attempt any 2 out of 3 sub-question; each 6 marks.

Rules of Continuous Internal Evaluation:

The Continuous Internal Evaluation for theory papers shall consist of two methods:

- **1. Continuous & Comprehensive Evaluation (CCE):** CCE will carry a maximum of 30% weightage (30/15 marks) of the total marks for a course. Before the start of the academic session in each semester, the subject teacher should choose any three assessment methods from the following list, with each method carrying 10/5 marks:
 - i. Individual Assignments
 - ii. Seminars/Classroom Presentations/Quizzes
 - iii. Group Discussions/Class Discussion/Group Assignments
 - iv. Case studies/Case lets
 - v. Participatory & Industry-Integrated Learning/Field visits
 - vi. Practical activities/Problem Solving Exercises
 - vii. Participation in Seminars/Academic Events/Symposia, etc.
 - viii. Mini Projects/Capstone Projects
 - ix. Book review/Article review/Article preparation
 - x. Any other academic activity
 - xi. Each chosen CCE method shall be based on a particular unit of the syllabus, ensuring that three units of the syllabus are mapped to the CCEs.

2. Internal Assessment Tests (IAT): IAT will carry a maximum of 10% weightage (10/5 marks) of the total marks for a course. IAT shall be conducted at the end of the semester and will assess the remaining unit of the syllabus that was not covered by the CCEs. The subject teacher can decide which units will be assessed using CCEs and which unit will be assessed based on IAT.

The overall weightage of Continuous Internal Evaluation (CCE + IAT) shall be 40% of the total marks for the course. The remaining 60% of the marks shall be allocated to the semester-end examinations.

The subject teachers must communicate the chosen CCE methods and the corresponding syllabus units to the students at the beginning of the semester to ensure clarity and proper preparation.

Practical Examination Credit 2: Pattern (30+20) External Practical Examination (30 marks):

- Practical examination shall be conducted by the respective department at the end of the semester.
- Practical examination will be of 3 hours and shall be conducted as scheduled.
- There shall be 05 marks for journal and viva voce. A certified journal is compulsory to appear for practical examination.
- The practical examination will be of a minimum of 3 hours duration and shall be conducted as per schedule for 2 consecutive days in case of practical where incubation conditions and allied aspects are essential.

Internal Practical Examination (20 marks):

- Internal practical examination of 10 marks will be conducted by the department as per the schedule given.
- For internal practical examination, students must produce the laboratory journal of practicals completed along with the completion certificate signed by the concerned teacher and department head.
- There shall be continuous assessment of 30 marks based on student performance throughout the semester. This assessment can include quizzes, group discussions, presentations and other activities the faculty assigns during regular practicals. For details, refer to internal theory examination guidelines.
- Finally, 40 (10+30) students' performance will be converted into 20 marks.

MIB-DSC-612: Pharmaceutical Microbiology

Total Hours: 60 Credits: 4

G		
Course	To introduce knowledge about antimicrobial agents. The state of	
objectives	To impart information related to regulatory aspects in the pharma industry To find the control of the con	
	To familiarize the students with aspects of laboratory practices To be an electronic policy because of the students with a spect of laboratory practices.	
Comman	To learn about various biopharmaceutical productions After a second of the secon	
Course outcomes	After successful completion of this course, students are expected to: • Get in-depth knowledge of the mechanisms of different antimicrobial agents	,
outcomes	 Understand quality control and regulatory aspects used in pharmaceuticals 	,
	 Infer and apply appropriate good laboratory practices 	
	 Apply knowledge of biopharmaceuticals for industrial production 	
Unit	Contents	Hours
		Hours
	Antibiotics and Synthetic antimicrobial agents	
	• Mechanism of action, microbial resistance, therapeutic/prophylactic	
	usage and adverse reactions	
	o Antibiotic and synthetic antimicrobial agents: beta-lactam,	
Unit I	aminoglycosides, tetracyclines, ansamycins, macrolidesAntifungal antibiotics: Griseofulvin, fluconazole	15
	A C 1 1 A C 1 NT 1 1 1	13
	 Antiviral drugs: Amantidines, Nucleoside analogues Peptide antibiotics 	
	 Synthetic antibiotics: Sulphonamides, Chloramphenicol, 	
	 Quinolones, Metronidazole 	
	Anticancer drugs	
	Regulatory aspects and quality assurance in pharmaceuticals	
	Regulations for the pharmaceutical industry	
	 General Lab designconsiderations: sample collection, testing, 	
	equipment, utility and service, air supply, contaminants, laboratory	
	safety	
	 Laboratory management : Training, quality, safety, LIMS 	
	• GMP in pharmaceuticals	
	o GMP: Key aspects, compliance, rules, Risk management and	
Unit II	documentation	15
	 US Food and Drug Administration (FDA) and European Union 	
	(EU GMP)	
	Design of sterile product manufacturing unit: Class A and clean room	
	• Quality control in pharmaceuticals: In-process and final product control	
	(antibiotics, immune sera, vaccines, biopharmaceuticals)	
	• ICH process	
	Sterilization control and sterility validation	
	In vitro and in vivo testing for pyrogens and endotoxin	
L		

	Microbiology laboratory techniques	
	Good laboratory practice (GLP), laboratory safety and aseptic	
	technique	
	Pharmacopeia and microbiological tests	
	Microbiological examination of nonsterile products:	
	 TVC: Bioburden determination, method validation, media 	
Unit III	growth promotion, sample preparation, test methods	15
	(membrane filtration, pour / spread plate, MPN)	
	 Tests for specified organisms and specification limits 	
	 Measurement of cell concentration in suspension by optical 	
	density	
	 Sterility testing 	
	 Environmental monitoring and water analysis 	
	Production of Biopharmaceuticals	
	Asparaginase and Clinical dextran	
	 Vaccines: multivalent subunit, bacterial, DNA vaccines 	
	 Viral vaccines: Live (attenuated, recombinant), Inactivated, Virion 	
	subunit vaccines, production of viruses for vaccines, Virus-like	
	particles, synthetic peptide vaccines	
Unit IV	 Immunosera and monoclonal antibodies 	15
	Rational drug design	
	 Concept and steps of drug design 	
	 Lead drug and Pro-drug with examples 	
	 Structure-based and combinatorial approach 	
	 Computer-aided drug design and software 	
D. C	Strategies for drug discovery and clinical trial

MIB-DSC-613: Agricultural Microbiology

Total Hour	rs: 60 Cro	edits: 4
Course	To introduce various attributes of microbial ecology	
objectives	To study the microbial interaction with plant root	
	To know the pathogenic interaction of microbes with plants	
	To learn the mechanism of plant defence and its biocontrol	
Course	After successful completion of this course, students are expected to:	
outcomes	Understand microbial ecology	
	 Comparevarious plant-microbe interactions for applications 	
	 Describe the mechanism of plant and pathogen interactions 	
	Categorise various approaches for biocontrol plant disease	
Unit	Contents	Hours
	Microbial Ecology	
	Basic microbial ecology and its components	
	Microbial interactions: positive and negative	
	Microbial communities: concepts, elements and methods of analysis:	
	CLPP, PLFA, DGCE, SSCP, ARDRA, FISH	
Unit I	Methods for quantitative microbial ecology	15
	Indicators of soil health	
	Applications of microbial ecology for bioremediation	
	 Integrated Plant Nutrition through biofertilizers 	
	 Phytoremediation: Rhizodegradation 	
	 Microbial reclamation of saline and sodic soils 	
	Microbial interactions with plant roots	
	Rhizosphere and Rhizosphere engineering	
	Mycorrhizae: VAM, ericoid and orchid mycorrhiza, Ectomycorrhiza	
	Plant Growth Promoting Rhizobacteria (PGPR)	
	Strategies for rhizosphere and mycorrhizae community study	
Unit II	Microbial interaction with aerial plant structure	15
	Phylloplane, Stems/ flowers, leaf buds	
	Strategies for Aerial Plant Structure Study	
	Leguminous root nodules	
	Nodulation process and mechanism of nitrogen fixation, <i>nif</i> operon	
	Strategies to study the infection process	
	Pathogenic interactions with plants	
	Plant defence mechanisms (structural, biochemical, HR, SAR)	
	Microbial pathogenicity mechanisms in viruses, bacteria, and fungal	
T I 24 TTT	pathogens	
Unit III	Genetic basis of plant-pathogen interactions	15
	• Region-specific plant diseases (aetiology, symptoms and control):	
	Red rot of sugarcane, Sigatoka disease of banana, Powdery mildew,	,
	Smut and Rust	

	Microbial Biocontrol of Plant Disease	
Unit IV	 Methods of plant disease detection: traditional and innovative Plant disease control: general strategies and principles of IDM 	
	 Bio pesticides: BT, Siderophore and Trichodermca, Pseudomonas, NPV, Beauveriabassiana 	15
	Biocontrol of post-harvest diseases	
	Control of plant pathogens by genetic engineering	
	Genetically modified crops

MIB-DSE-614A: Plant and animal tissue culture

Total Hour	rs: 30 Cre	edits: 2
Course	To acquaint basic knowledge about Plant tissue culture	
objectives	To apprise basic knowledge about Animal tissue culture	
Course	After successful completion of this course, students are expected to:	
outcomes	Relate information required for PTC laboratory	
	Infer techniques require for Animal tissue culture	
Unit	Contents	Hours
	Introduction to plant tissue culture	
	 Laboratory organization of PTC and aseptic techniques 	
	Basic structure and growth of a plant	
	Benefits and application of plant tissue culture	
	• Definition: Ex-plant, callus, differentiation, re-differentiation,	
	Totipotency	
	Culture media composition	
	Basic techniques of plant tissue culture	
Unit I		15
	In vitro germplasm conservation and Cryopreservation	
	 Methods in Plant tissue culture Callus culture and Cell culture 	
	o Protoplast: Isolation, culture and regeneration	
	o Somatic hybridization: mechanism of protoplast fusion, selection	
	of hybrid cells, cybrids, applications and limitation	
	o Organ culture (In vitro production of haploid plants):	
	Androgenesis (anther and pollen culture) and Gynogenesis	
	(ovary and ovule culture).	
	Introduction to Animal Cell and Tissue Culture	
	Animal tissue culture laboratory: facilities, aseptic condition and risk	
	 Advantages and limitations of animal tissue culture 	
	Cultural media: Physicochemical properties and composition	
	• Cell lines: types (finite and continuous), monoculture	
	• Primary culture: Techniques of disaggregation – (mechanical	
	enzymatic)	
Unit II	• Cultured cells:	15
	 Characteristics 	
	 Cell adhesion, proliferation and differentiation 	
	 Initiation and development of cell culture 	
	Senescence and apoptosis	
	Transformation in animal cells	
	o Cell transformation - In vitro culture of oocytes/embryos, DNA	
	microinjection, Cell/embryo cryopreservation	
	 Scaling up of Animal Cell Culture

MIB-DSE-614B: Interdisciplinary Concepts in Microbiology

Total Hour	rs: 30	redits: 2
Course	Introduce students to the fundamentals of nanotechnology Biosensor	
objectives	Understand the importance of medical coding in healthcare documentation.	
Course	After successful completion of this course, students are expected to:	
outcomes	• Explore the applications of nanomaterials and Biosensors.	
	Acquire essential knowledge and guidelines of various coding systems	
Unit	Contents	Hours
	Nano technology	
	Historical development and critical milestones in nanobiotechnology.	
	Overview of nanoscale phenomena relevant to microbiology.	
	 Principles of nanosensors and nanoprobes for microbial detection. 	
	• Mechanisms of interaction between nanomaterials and microbial cells.	
	• Impact of nanomaterial properties on microbial adhesion, growth, and behaviour.	
	• Applications of nanobiotechnology in agriculture, food safety, bioremediation, rapid diagnostics and biosensing, environmental monitoring and remediation of microbial pollutants, nanoparticles as drug delivery vehicles, and microbial biofilms.	
Unit I	Biosensors	15
	 Definition, scope, components and sensing principle of biosensor. 	
	Classification of biosensors based on transduction mechanisms.	
	• Overview of optical, electrochemical, and piezoelectric biosensors.	
	• Factors influencing biosensor design: sensitivity, selectivity, stability	
	• Strategies for surface functionalization and biomolecule immobilization.	
	• Overview of fabrication methods for biosensors: microfabrication, thin-film deposition, etc.	
	 Applications of biosensors in medical diagnostics and monitoring, environmental sensing and pollution monitoring, food safety, agriculture, and bioprocessing. 	
	Medical coding	
	 Definition and importance of medical coding in healthcare. 	
	• Introduction to coding systems: ICD-10-CM, CPT, and HCPCS.	
	• Understanding the structure and format of code sets.	
Unit II	• Fundamentals of medical terminology: Prefixes, roots, and suffixes.	15
	• Common medical terms related to anatomy, physiology, and diseases	
	relevant to medical coding.	
	Principles and guidelines for accurate medical coding.	
	 Application of coding conventions, modifiers, and placeholders. 	
	 Case studies and coding exercises to apply learned concepts.

MIB-DSE-616A: Practicals on Plant and Animal Tissue Culture

Total Hours: 60 Credits: 2

Course To understand methods in tissue culture

Course	To understand methods in tissue culture		
objectives	To know tissue culture media and inoculation		
	• To learn about advanced techniques associated with tissue culture		
CourseOut	After successful completion of this course, students are expected to:		
comes	Acquaint knowledge about tissue culture laboratory setup		
	 Learn about media used in tissue culture 		
	 Acquaint knowledge about micropropagation, endosperm culture root 	and	
	callus induction		
Sr. No.	Contents	Hours	
1	Acquaintance with plant / animal tissue culture laboratory plan	4	
2	Acquaintance with plant / animal tissue culture laboratory equipment	4	
3	Preparation and sterilization of MS/ATC medium, stocks and explants	4	
4	Induction of callus using suitable explant.	4	
5	Induction of Root tip culture using suitable explant.	4	
6	Induction of shoots tip culture using suitable explant.	4	
7	Development of Endosperm/ Meristem / Anther / Pollen culture using suitable plant material.	4	
8	Effect of plant growth regulators on callus induction	4	
9	Isolate the protoplast from given explant	4	
10	Development of somatic embryo from suitable tissue	4	
11	Quantitiative detection of phytochemicals / secondary metabolite from callus (alkaloids, phenols, glycosidesetc)	4	
12	Micropropagation of suitable explant	4	
13	Isolation and separation of animal cells with a suitable method	4	
14	Preparation of primary animal cell culture and its maintenance	4	
15	Estiation of viable cells of animal cell culture by using trypan blue	4

MIB-DSE-616B: Practicals on Interdisciplinary Microbiology

Total Hours: 60 Credits: 2

Course objectives	 To introduce Interdisciplinary concepts related to microbiology To learn experiments with nanotechnology 	
	 To understand biostatistics and other related topics 	
Course	After successful completion of this course, students are expected to:	
Outcomes	 Plan microbiological experiments with an interdisciplinary approa 	nch
	Perform experiments with nanotechnology	
	Explore the interdisciplinary nature of microbiology	
Sr. No.	Contents	Hours
1	Synthesis of Au/Ag metal nanoparticles by chemical route.	4
2	Optical properties of Au/Ag nanoparticles by using UV-Vis spectroscopy.	4
3	To calculate the absorption coefficient and optical band gap using UV-Vis. Spectroscopy.	4
4	Analysis of CNTs / nanoparticlesby UV-Vis.	4
5	Analysis of CNTs / nanoparticles by FTIR spectroscopy.	4
6	Determination of antimicrobial properties of silver nanoparticles.	4
7	Biosensing by nanozymes using UV-Vis spectroscopy.	4
8	Synthesis of metal nanoparticles using plant extracts and characterization	4
9	Practical based on sampling and biostatistics	4
10	Four probe methods determine the electrical conductivity of metals/alloys.	4
11	Electrochemical sensing of glucose	4
12	Hall effect - Determination of Hall coefficient.	4
13	Determination of metal ion content using AAS.	4
14	Mixing/ cleaning/ degassing/ cell disruption/ sample preparation using ultrasonicator	4
15	Visit to Physics/ electronics research laboratory for instrumentation	4

MIB-RM-617: Research Project I

Course	1. To give exposure to the students to research culture and technology	
objectives	 To introduce students to how to select a research topic, plan, perform expe collect and analyze the data To foster self-confidence and self-reliance in the students as they learn to w think independently 	
Course	After successful completion of this course, students are expected to:	
outcomes	 Conceive a problem based on published research and conduct a comprediterature survey. Learn handling of instruments, use of chemicals and how to concexperiments Learn how to present the project in PowerPoint and answer the quexaminers and the science of writing. 	duct the
Unit	Contents	Hours

Credit distribution (1 credit for each unit)

- Identification of a research topic, formulation of research problem, objectives, sample size and hypothesis, etc
- Preparation of Outline
- Review of literature
- Bibliography

Hours 120

The systematic approach towards the execution of the project should be as follows: (Wherever applicable)

- 1. The complete tenure of the research project should be one year. It should be allotted during the third semester and completed in the fourth semester.
- 2. Weekly 8 hours should be allotted to the research project in a regular timetable.
- 3. In the third semester, students will be evaluated based on a credit distribution mentioned above. In the fourth semester, students should perform further research work, collect and analyze the data, compile the results and prepare and submit the final dissertation.
- 4. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 5. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.
- 6. Each research group should have a different research topic with some possible level of novelty.
- 7. The student should select the topic relevant to priority areas of concern or allied subjects with the guidance of supervisor/ head of the department.
- 8. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.
- 9. At the beginning, students should submit the outline of the research work to be carried out in the project. (Writing in order: Title, Aim and objectives, Literature to be collected, Experimental plan or method design, expected outcome etc.)
- 10. Write and submit a Literature Review Report and Research outline

Cradite 1

Tentative order for review: Title of the Project, Certificates, Acknowledgment, Abstract and Keywords, Contents, Introduction, Literature Review, Aim of the Project, Materials and Methods, Bibliography/reference etc.

Tentative order for research outline: Title page, introduction, background and significance of study, problems to be investigated, objective, hypothesis, chapter scheme, bibliography.

- 11. At the end of the third semester, each student should submit a detailed Literature Review Report and research outline.
- 12. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 13. Students should maintain lab notebooks, and the Supervisor may ask them to submit the midsemester progress report.
- 14. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 15. Three copies of the Literature Review Report, research outline should be prepared (one copy for each department, guide, and student).
- 16. At the end of the semester, the candidate should prepare and present research work using a PowerPoint presentation with modern ICT tools and present the same in front of his/ her respective department during the Internal Examination.
- 17. For external examination the candidate will have to present the research work and face viva voce.
- 18. Students may present their research work in Avishkar/Webinars/Conferences.
- 19. Students should note that plagiarism is strictly prohibited.

Internal examination (40 marks): Components of continuous internal assessment:

- Draft Research Outline (10 marks)
- Draft Review of literature (10 marks)
- Working Bibliography (10 marks)
- PowerPoint presentation, and oral examination (10 marks)

External examination (60 marks) and Components of external assessment:

- Final submitted review report, research outline in bound form at the time of examination (40 marks)
- Overall presentation reflecting the contribution of work, response to questions (20 marks)

MIB-DSC-621: Advances in Fermentation Technology

Total Hour	rs: 60 Cr	redits: 4
Course	To introduce upstream processing in microbial fermentation	
objectives	To learn about bioreactors	
	To familiarize with recovery techniques used for fermentation products	
	Tointroduce the microbial processes for the production of various metabolit	tes
Course	After successful completion of this course, students are expected to:	
outcomes	Implement upstream processes at the industry	
	Get knowledge about bioreactor configuration and operation	
	 Justify relevant recovery process for microbial products 	
	Plan the production process for microbial products.	
Unit	Contents	Hours
	Upstream processing	
	• Overview of typical microbial fermentation process (sterilization,	
	inoculum, sampling, aeration, control system, cleaning)	
	Microbial growth: kinetics, measurement	
	Inoculum:	
	o Criteria for suitable inoculum (purity, stage of growth,	
	physiology, quantity, quality)	
	 Acclimatization, seed media 	
Unit I	 Development of inoculum for following processes with one 	15
	example: Yeast, Mycelial, Bacterial.	
	 Aseptic inoculation of fermenter 	
	Media for industrial fermentation:	
	 Types (synthetic and natural) 	
	o Formulation and Optimization	
	Fermentation- kinetics of batch and continuous culture	
	• Strain improvement: mutation, recombination, Parasexual Cycle,	
	Protoplast fusion and rDNA technique	
	Bioreactor (Design and Application) and its operation	
	Design and construction materials of bioreactor	
	• Types of Bioreactor: continuous stirred tank, airlift, tower,	
	fluidized and packedbed, photobioreactor, Bubble Column	
	Bioreactors	
T1 '4 TT	• Sterilization: Del factor, batch and continuous sterilization and	15
Unit II	air(heat, filtration)	15
	Maintenance of aseptic condition	
	• Fermentation Process Parameters and Monitoring: aeration and	
	agitation system, sterility, pH, temperature, foam, DO, Pressure	
	andinlet& exit gas analysis. and process of automation	
	Solid state fermentation: concept, bioreactor, advantages and disadvantages	
	disadvantage	

	 Scale-up of fermentation:Major factors involved, Sale-up window, methods Mass and Heat transfer during fermentation 	
Unit III	 Downstream processing Biomass harvesting and removal of solid matter: ○ Criteria for choice of recovery ○ Methods: centrifugation, filtration, flocculation Cell disruption: mechanical, physical, chemical and enzymatic methods Product concentration: evaporation, liquid—liquid extraction, supercritical fluid extraction, ultrafiltration/membrane filtration, precipitation, three-phase partitioning, Product purification and characterization: chromatography-adsorption, size exclusion, affinity, ion exchange, reverse phase, HPLC Formulation: Drying (spray drying, freeze drying) Biosafety: Handling infectious and Recombinant microorganisms Production economics: cost (capital, operating), factors affecting 	15
Unit IV	 Microbial Products Enzymes: Protease, Penicillin acylase Organic acids: Gluconic acid Amino acids: L glutamic acid Polysaccharides: Polysaccharides (Alginate and Hyaluronic acid) Others: Probiotics and Yoghurt, Antibiotics: Rifamycin Ethanol: 1st, 2nd and 3rd generation Nucleotides: IMP, GMP Heterologous protein production with example Mammalian cell products: Monoclonal antibodies and vaccines Heterologous protein: INF, tissue plasminogen activator (TPA), GMCSF 	15

MIB-DSC-622: Biostatistics and Bioinformatics

Total Hour	c: 60	redits: 4
Course	To impart an understanding of elementary aspects of bio-statistics	cuits. T
objectives	 To learn various statistical techniques applicable to biology 	
J	To introduce an overview of bioinformatics	
	To analyse the output data to predict a biologically relevant function	
Course	After successful completion of this course, students are expected to:	
outcomes	Apply basic biostatistical techniques for biological data	
	Practice biostatistics for interpretation of experimental data	
	 Use fundamentals of bioinformatics for analysis of database 	
	Access and interpretthe information from databases	
Unit	Contents	Hours
	Sampling and central tendency (theoretical concepts)	
	 Applications of biostatistics to biological database 	
	• Concepts: population, sample, probability, central tendency, dispersion, variance	
	• Sampling types: simple random, stratified, systematic, cluster	
	• Data : collection (primary and secondary), classification and tabulation	
Unit I	of data	15
	• Graphical techniques: one-dimensional, two-dimensional, pictograms	
	• Graphical presentation of data: histogram, frequency polygon,	
	frequency curve, ogive curve	
	Measures of Central tendency: Mean, Mode, Median	
	• Measures of dispersion: range, mean deviation, standard deviation,	
	coefficient of variation, skewness	
	Correlation, Regression, probability, ANOVA (theoretical concepts)	
	Correlation: definition, types, methods of measuring	
	• Regression :definition, equation, coefficient, Simple linear	
	regression,	
	• Analysis of Variance: One and two-way analysis of variance,	
	Intro experiments, Multivariate statistical analysis	
Unit II	• Probability: Definition, concepts: experiment, event (simple,	15
	compound, mutually exclusive, independent, dependent)	
	• Discrete distributions : Bernoulli, Binomial, Poisson. Continuous	
	distributions: Normal, Exponential, sigma limits, and probability	
	coverage.	
	• Concepts: Hypothesis testing, t-test, F test, Chi-square test, Design of	
	experiments, multivariate statistics	
	Overview of Bioinformatics	
Unit III	• Concept of Bioinformatics: definition, scope, application and	15
	limitations	13
	 Introduction to biological databases 	

	Primary (GenBank, EMBL, SWISS-PROT)	
	• Secondary (PROSITE, pfam)	
	• Specialized (GenBank EST and Microarray Gene	
	Expression)	
	UNIPROT database	
	• Structural databases: PDB, MMDB	
	 Sequence retrieval system - SRS, ENTREZ, Expasy 	
	• Software for Data Visualization: CN3D, Rasmol, Chimera, SWISS	
	PDB Viewer	
	 Application of programming Language in Biology: Bioperl, Biojava and R Programming 	
	• Protein structure prediction: Secondary structure (Globular,	
	Transmembrane), 3D Structure prediction (X-ray	
	Crystallography,NMR Spectroscopy)	
	Classification of protein Structure: SCOP	
	Sequence analysis and phylogeny	
	Sequence analysis: Concept of % Identity, Twilight Zone and mid-	
	night zone	
	 Concept of homology, analogy, othology and paralogy 	
	• Sequence alignment: pairwise (local, global) and multiple	
	sequences (Clustal W editing and interpretation)	
	Alignment Algorithms: Dot Matrix and Dynamic Programming,	
Unit IV	Gap Penalties	15
	 Introduction to scoring matrices-PAM and BLOSSUM 	
	Database similarity searching: BLAST(Variants and statistical	
	Significance) FASTA (statistical Significance)	
	Phylogenetic analysis: Definition, Choice of Molecular Markers	
	Phylogenetic tree: Terminology, construction methods (maximum)	
	Parsimony, Maximum Likelihood), Evaluation (Bootstrapping and	
	Jackknifing, Phylogenetic Programs).

MIB-DSC-623A: Entrepreneurship in Microbiology

Hours: 30	Cı	redits: 2
Course	• To impart an understanding of business management and entrepreneurship	
objectives	 To understand the basics of business ethics, safety and IPR 	
Course	After successful completion of this course, students are expected to:	
outcomes	 Understand fundamental business, management, marketing, operation and 	HRM
	 Address the issues related to business ethics and understand the concept and IPR 	
Unit	Contents	Hours
	Introduction to Business and Management	
Unit I	 Management: Definition, concept, importance Levels, Functions and Skills Decision making Strategic management: characteristics, importance SWOT analysis Production and operation management, concept of TQM Marketing and Marketing research Financial management: Concept of capital budgeting and working capital Human resource management and planning Business development and skills for bio-entrepreneurship Characteristics for being an entrepreneur in microbiology. Factors affecting microbiology/ biotechnology business: Role of government and schemes and Financial institutions. Personality, attitude, organizational behavior, leadership Principles of effective communication. Body language, public speaking, presentations Business proposal writing. 	15
	 Case studies of successful and unsuccessful bio-entrepreneurship. Ethics, regulation and safety 	
Unit II	 Business ethics: meaning, principals &Ethical dilemmas in Bioindustry Current regulatory bodies and laws/regulations for industry Biologics License Application (BLA) Safety and precautionsBiological, Chemical and Personal Biosafety: levels (BL 1, 2, 3, 4), GMOs and risks Intellectual property and IPR IPR- Concept, Forms of IPR, patentable and non-patentable items Legislations covering IPR's in India Steps in filing a patent, provisional and complete specification Valuation of patent and business concerns 	15

MIB-DSE-625:Practicalson Fermentation Technology

Total Hours: 60 Credits: 2

Course	To know generalconsiderationsfor the fermentationprocess	
objectives	To learn statistical applications in process optimization	
	To produce the fermentative product ina laboratory	
Course	After successful completion of this course, students are expected to:	
Outcomes	Use the knowledge of laboratory fermentations	
	Perform the optimization of the fermentation process	
	Demonstrate various fermentative production of microbial products	
Sr. No.	Contents	Hours
1	Fermentor: demonstration of parts, cleaning, sterilization and assembling	4
,	Aseptic techniques in inoculation of fermenters and Aseptic sampling from fermentors	4
3	Calibration of fermentatorelectrodes/probes	4
4	Production and quantification of biomass (yeast/ Fungal /algae)	4
	Laboratory-scale fermentation of antibiotics/enzyme	4
0	Down Stream processing with an enzyme: filtrations, centrifugation, TFF	4
	Optimization of fermentation parameters using one factor at a time (OFAT) design	4
8	Screening of fermentation parameters using a statistical method	4
9	Application of response surface methodology for statistical optimizations of factors.	4
10	Production of fermentation products using chemically defined and crude economical raw material (molasses, agro-waste, food/dairy industry)	4
	Production of probiotics/yoghurt/curd/buttermilk	4
12	Production, application and efficacy determination of biofertilizer /siderophore (Pseudomonas biofertilizer in talc powder/ Azo/Rhizo)	4
13	Culturing and characterization of actinomycetes used in the pharmaceutical industry	4
14	Laboratory production of edible mushroom	4
15	Production of fermented products from SSF	4

MIB-DSE-626A: Practical on Professional development

Total Hours: 60 Credits: 2

Course objectives	 Develop effective communication skills for scientific presentations Enhance career planning and job search strategies. Learn the essentials of project writing, business skill 	S	
Course	After successful completion of this course, students are expected to:		
Outcomes	Write concise scientific reports and deliver informative presentations.		
	 Create professional and targeted CVs and cover letters 		
	Be well-prepared to advance in their professional careers		
Sr. No.	Contents	Hours	
1	Prepare the MS PowerPoint-based presentations.	4	
2	Demonstrate the working of the MS Word application.	4	
3	Preparation of table and graph using MS Excel.	4	
4	Preparation of standard operating procedure for the instrument.	4	
5	Preparation of Curriculum Vitae.	4	
6	To learn the interview techniques through a mock activity.	4	
7	Discussion of a topic through group discussion activity	4	
8	Preparation of application letter for interview/ leave etc.	4	
9	To learn the process of report writing / Effective scientific writing	4	
10	Practical based on Grammar / Vocabulary/plagiarism	4	
11	To learn the technique of communication skills- Speaking / public speaking	4	
12	Practical based on Self-assessment/goal setting/career planning	4	
13	Practical based on Marketing skill: advertisement/ video making and selling product	4	
14	Practical based on team building/management/leadership skill	4	
15	Case study / analytical -logicalthinking skills	4

MIB-DSE-626 B: Practicals on Food and Dairy Microbiology

Total Hours: 60 Credits: 2

I otal Hours		rcuits. 2
Course	To learn various milk and food testing procedures	
objectives	 To know food-associated pathogens and spoilage To be aware about food safety 	
Course	After successful completion of this course, students are expected to:	
Outcomes	Examine milk and food samples	
Outcomes	<u>=</u>	
	Infere about the quality of various food samples Apple and appeting for five languages.	
~	Apply good practices for food safety	
Sr. No.	Contents	Hours
1	Estimation of carbohydrate and protein content of food material	4
2	Estimation of the fat content of food material	4
3	Microbiological examination of milk – SPC and DMC	4
4	MBRT tests for the quality of milk	4
5	Pasteurization of milk and determination of efficacy using alkaline phosphatase test	4
6	Estimation of mycotoxin in food samples by TLC	4
7	Isolation of microorganisms from	4
8	Isolation of food-borne bacteria/ fungi from food products/ Canned food. (Salmonella/ E. coli/ S. aureous/ coliform etc.)	4
9	Isolation of microorganisms from spoiled bread.	4
10	Isolation of bacteria/ fungi from spoiled fruits and vegetables.	4
11	Effect of temperature on the spoilage of food products	4
12	Study of strategies for food/milk sampling –liquid/ solid	4
13	Isolation of bacterial probiotics from curd and development of probiotics in vitro	4
14	Description of standard practices for food safety in Hazard analysis criteria control points	4
15	Field visit/study tour to milk/ food industry/bakery	4

MIB- 627: Research Project II

Hours: 18	<u>su</u>	Credits: 6
Course	1.	To give exposure to the students to research culture and technology
objectives	2.	To introduce students to how to select a research topic, plan, perform experiments,
		collect data and analyze the data
	3.	To foster self-confidence and self-reliance in the students as they learn to work and think independently
Course	Af	er successful completion of this course, students are expected to:
outcomes		 Conceive a problem based on published research and carry out a comprehensive survey of the literature
		 Learn handling of instruments, use of chemicals and how to conduct the experiments
		1
		 Learn how to present the project in PowerPoint and answer the queries to examiners as well as the science of writing

The systematic approach towards the execution of the project should be as follows: (Wherever applicable)

The complete tenure of the research project should be one academic year. It should be allotted during the third semester and completed in the fourth semester.

- 1. Weekly 12 hours should be allotted to the research project in a regular timetable.
- 2. In the fourth semester, students should perform further experimental work, analyze the data and compile the results.
- 3. Students may be given an opportunity to participate in ongoing research activities in the respective Departments/Schools/Supervisors' laboratories. This will familiarize them with the literature survey and give them a fundamental understanding of designing and executing a research project.
- 4. Students may work individually or in groups (not more than 3 students) to be decided by the concerned department/supervisor.
- 5. Each research group should have a different research topic with some possible level of novelty.
- 6. The student should select the topic relevant to priority areas of concern or allied subjects.
- 7. Students are encouraged to work on multidisciplinary and applied projects, but it is not mandatory criteria.
- 8. Students are expected to work in line with the research outline and literature review, which was submitted in the third semester.
- 9. Students are expected to learn how to execute the research work systematically and overcome the hurdles. Students will get the opportunity to learn about practical aspects of many characterization techniques or models and further how to effectively employ them in the research work. Students should be able to critically evaluate the literature on the topic, identify the research gaps, plan and perform the experiments, interpret the results, understand the limitations of the work and draw conclusions.
- 10. At the end of the semester, each student should submit a detailed Research Report.
- 11. The format of the final research report shall be as per the guidelines of respective department. (**Example**:Title of the Project, Certificates, Acknowledgment, Abstract and Keywords, Contents, Introduction, Literature Review, Aim and objective, Materials and Methods, Result, Data analysis and Discussions, conclusion, limitations, suggestion, future scope, Bibliography,

C--- 1!4-- C

Appendix etc.)

- 12. An appropriate and essential conclusive statement must be drawn at the end of the study.
- 13. Students should maintain lab notebooks, and the supervisor may ask them to submit the midsemester progress report.
- 14. For documents related to project submission: Font- Times New Roman, Heading Font Size-14, Normal Text Size-12, spacing-1.5, both sides justified and 1 inch margin on all side, both side printing on A-4 size.
- 15. Three copies of the dissertation should be prepared (one copy for each department, guide, and student).
- 16. At the end of the semester, the candidate should prepare and present research using a PowerPoint presentation using modern ICT tools during the Internal and External Examination.
- 17. Besides writing a dissertation, students are encouraged to write a manuscript/patent if the results obtained are worthy of publication.
- 18. Students may present their research work in Avishkar/Webinars/Conferences.
- 19. Students should note that plagiarism is strictly prohibited.

Internal examination (60 marks): Components of continuous internal assessment:

- Literature collected, methodological planning, analysis of data, design and work, progress reports etc (30 marks)
- Presentation in Webinars/Conferences/publication and departmental presentationetc(20 marks)
- Oral examination (10 marks)

External examination (90 marks) and Components of external assessment:

- Evaluation of dissertation submitted in bound form at the time of examination (60 marks)
- Presentation (PPT format) (15 marks)
- Overall presentation reflecting the contribution of work, Response to questions (15 marks)
